

Rebel Yell

Nuclear Ballistic Missile Submarine (SSBN) Interdiction (Sea of Okhotsk)

When ready for sea, get underway and proceed to the Sea of Okhotsk.

Rebel forces in the former Soviet Union have gained control of one nuclear powered ballistic missile submarine (SSBN) and several nuclear powered attack submarines (SSNs). They are being used to threaten the legitimate governments of several republics.

Your mission is to search for, localize, and track the SSBN.

Current intelligence and tasking will be provided by message. Should the President deem it necessary, you will be tasked with the destruction of the SSBN. Weapons loadout should be optimized for ASW.

ADM Kim Castro
Commander, US Seventh Fleet
