

# Mission #1: SEALing Their Fate Part I

*(Could be combined with Part II to make one Scenario)*

SOF Insertion Mission (Cuba)

SITUATION: US Intelligence agencies have discovered the location of a possible drug factory in the vicinity of Cienfuegos in Cuba. This provides a rare opportunity to gather information on the operations of the Colombian-Cuban Drug Pipeline.

MISSION: After some well earned liberty in Fort Lauderdale, FL, you have reloaded weapons and food and returned to sea. You are in the vicinity of 26N, 079-40W when you receive a message. You have been selected for a highly clandestine, covert operation. Report your estimated time of arrival (ETA) in the vicinity of 21-30N, 080-30W, and then assume a condition of complete emissions control (EMCON). Approach the ports of Cienfuegos and dispatch a SEAL team at night to go ashore, enter the reputed drug factory, gather information, and return.

You MUST NOT allow yourself to be detected, as this will trigger an international Incident. The SEALs will go in without dog tags, standard uniforms, standard weapons, or identification of any sort. Break radio silence only if the mission is aborted, if you are identified as a US Submarine, or if you are attacked. Once clear of the coastline by more than 100nm, transmit a mission report of the mission and the intelligence information gathered.
