

Japanese Aircraft Wire Chart

Please contact me if you find any errors via email or PM.

This wire chart was inspired by Mike Solli who shared his with me.

It is suppose to be a quick reference for planning and upgrading aircraft. Japan only~! Allies need no help.

Below is an *example*.

First, if the box is shaded **BLUE**, it is an AC that is not available to start building at the beginning of the game. **If it is a DECK color it is carrier capable 12/41 and later.** You *may* also find a name of the AC, like Zero, above each box(s).

Line1- The reference name of the aircraft and date of availability.

If the name is in blue = navy, green = army. Only on some pages to save space.

Line 2- Is the engine (# of engines x type) and Endurance (E).

Note the orange, indicates change of engine for that upgrade path.

Line 3 – Range = Normal + *Drop tanks*, if available, Maneuver band (M)-(highest) and Durability (D). (# following the + symbol represents the drop tank range)

Line 4 – Armor (A), Service Rating (SR), Gun Value (GV), Max speed (SP)-underlined

Line5 – Varies slightly, but usually guns and bomb load (1x ?) and/or possible radar. (you may see 2xHO-() = 2x each type in (). Transports only list max load. Most HB only list something added, most bomb loads didn't change through out.

Colors are up for discussion. *This is what I did:* I based color differences on the PREVIOUS model first if there was one, and 2nd on models that came around that same time.

Red is a negative ; Green is a positive; Orange is “worth noting”.

Some later models have more red, but MAY have an increase in altitude or speed so keep that in mind.

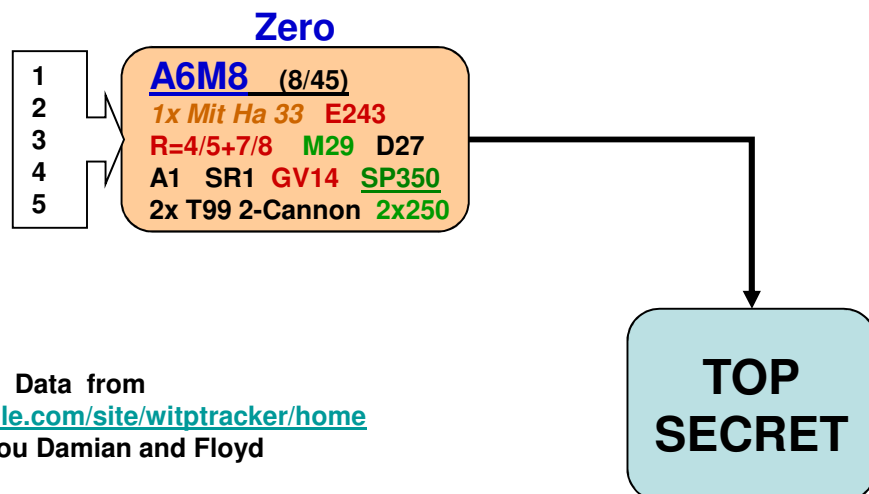

The dark blue on some of the extended ranges is just there to break the numbers up.

If you see an arrow, that AC upgrades to that model.

NO ARROW, NO UPGRADE PATH

Special thanks to Omat for your help in getting it right~!

Thanks to AE and all of their support for a truly awesome game~!
