

Command community scenario pack

Northern Fury 1 - H Hour, 1994 : The Cold War did not end, and World War III has kicked off in February 1994. Soviet forces are attacking en masse. As commander of all Norwegian & NATO forces in Norway, you must hold the line.

Northern Fury 2 - X-Ray, 1994 : X-Ray Station was a longstanding patrol area for NATO submarines whose job it was to keep tabs on the Soviet Red Banner Northern Fleet, in particular the major surface units and the SSBNs. Several US and occasionally UK submarines were on this station for almost 30 years. Now on the eve of hostilities, a Seawolf-class submarine takes up post on X-Ray.

Northern Fury 4 - A Cold and Lonely Place, 1994 : The war is now fully underway. NATO and Soviet forces race for control of Jan Mayen island, a crucial stepping stone to Iceland.

Texas Crow, 2020 : Trinidad and Tobago, with possible Chinese backing, refused to turn over an indicted drug lord to the United States for trial. The USN has dispatched a Littoral Combat Group (LCG), including an up-armed "Block II" Independence-class LCS, to the waters around Trinidad.

Smart Bracelet, 2014 : Mexico is dealing with a drug cartel based in Guatemala. The cartel has been smuggling both drugs and weapons into Mexico. The Mexican government is determined to stop these criminal activities.

USS Baltimore CS1 - Typhoon Hell, 1983 : Following the KAL-007 shootdown in 1983, NATO-Soviet tensions have reached a fever pitch. USS Baltimore, a top-line LA-class submarine, is instructed to trail a Soviet Victor-III submarine departing the Kola. The ultimate destination: The undisclosed patrol area of the new Typhoon-class SSBN.

Podengo Monday, 1968 : Tanzania embraces communism, receives Soviet help and destabilizes Mozambique to liberate it from Portugal . The Portuguese navy is instructed to intervene.

Great Asian War: Southwestern Front, 2018 : The Second Sino-Vietnamese War, or Great Asian War, was marked by the PLA air forces launching the largest air campaign in mainland Asia since Operation Linebacker. In the course of this campaign, the Chinese used the Liaoning strike group in attacks on Cambodia, Vietnam's vassal. This is China's first use of a carrier group in anger.

Sandies and Jollies, 1968 : A Marine Corps F-4J was shot down over southern North Vietnam and both crew members ejected. A rescue mission is on standby at Da Nang Airbase. Take command and pick up the downed aircrew!

Med Conflict, 1990 : US assets and citizens in Libya and Algeria have been attacked. Available USN assets in the Med are placed on DEFCON-2, and the Marine group SAG-386 is instructed to move in to stop further attacks. Are these events isolated, or is it a Soviet trap?

Red Storm - Fill the Gap, 1990 : A coup in the Kremlin triggers World War III. NATO, having been taken by surprise by the coup, reacts as quickly as possible but fails to stop the capture of Iceland by the Soviets. With the GIUK line now compromised, the American, Norwegian and British Navies rush to fill the gap to contain the Soviet forces.

Red Storm - Vampire,Vampire!, 1990 : Soviet forces have captured Bodo and are preparing to assault US carrier forces in the Norwegian Sea. The Nimitz CVBG is instructed to strike at captured Keflavik and defend against incoming Backfire raids. Can a single carrier hold the line?

Excellent Loon, 1976 : Canada turns up the pressure on Soviet naval vessels transiting through its home waters. How far can they push the Bear before something breaks out?

US Naval Air Power Debate: Baseline, 2016 : What is the ideal mix of fighter assets for USN carrier ops in the near future? Experiment and find out in this triad of hypothetical crisis scenarios. First, a balanced fleet of JSFs and Super Hornets.

US Naval Air Power Debate: F-35, 2016 : The debate continues. This time an all-JSF air wing.

US Naval Air Power Debate: Super Hornet, 2016 : Concluding the debate with a variation of an all-Super Hornet wing.

Operation Journeyman, 1977 : Argentina and the UK clash over a base on Thule, five years ahead of the Falklands story.

Crimean War Episodes: Operation Tiger Rifle, 2014 : Based on the evolving crisis in the Ukraine. A combined USN task force with support from Romania-based USAF assets must kick down the Russian A2/AD door (including formidable Yakhont and S-400 batteries) and sink the bulk of Russia's Black Sea surface force. And with no stealth assets. Can it be done?

USS Baltimore SC2 – Two Birds One Stone, 1983: USS Baltimore emerges from the Greenland ice sheath on the sixth day of hostilities, after killing a Soviet Typhoon SSBN and a Victor III SSN in the Barents Sea on the opening days of the conflict. Meanwhile the Soviets have taken Reykjavik, Iceland and Narvik, Norway. USS Baltimore must do

what she can to stem the flow of Soviet subs into the North Atlantic and suppress the resupply of Reykjavik.

Deter, Detect, Defend, 1962: A few months before the historical Cuban missile crisis, another hypothetical crisis erupts between the superpowers. Unlike Cuba, this one escalates out of control, and a strategic exchange commences. As hundreds of SAC bombers depart for Soviet targets, waves of Soviet bombers have been detected enroute to the United States. You are in charge of the north-western sector of NORAD. Use your US & Canadian interceptors, some of them nuclear-armed, to defend against the onslaught.

Regaining Honor, 2015: The instability within Yemen has led to the United States stationing increasingly large numbers of troops and equipment in nearby Djibouti and dramatically increasing drone activity. Several collateral damage incidents and the constant presence of UAVs have angered both the Yemeni public and politicians. Faced with this pressure, the Yemeni minister of defense has proposed a limited show of strength, to "restore his country's honor": Shoot down as many American drones as possible, and any fighters that will interfere.

Mururoa 1973: France has ignored repeated requests (including an International Court injunction) to stop the nuclear tests on the Mururoa atoll. Realizing that only active force will settle the issue, a joint Australia-NZ task force is sailing to the area authorized to destroy the test facilities. However, French forces carrying the next test device are also arriving. Will the HMAS Melbourne have to go toe-to-toe with Clemenceau?

Chillied Sea Slugs, 1988: The long-standing Chile-Peru maritime border dispute escalates as Chile attempts to enforce its claims by driving Peruvian vessels away using its sole Brooklyn-class light cruises. But will Peru turn the other cheek?

Spanish Guinea, 1995: Oil exploration and production has boomed in the Gulf of Guinea. The once Spanish colony of Equatorial Guinea's corrupt government has asked for Spanish assistance with protection of the country's offshore oil and gas platforms. Tensions with Nigeria have escalated as they continue to press their claims on the offshore oil fields. A minefield has been detected stopping all access to oil platforms, and Spanish mine sweepers have been dispatched to clean it up. But mines are the least of concerns: Pirates lurk in the thick commercial traffic, and a resurgent Nigeria is unlikely to let events unfold without intervening.

Four Ounces Can Move Four Thousand Pounds, 2016: Early in the outbreak of hostilities between China and Japan, both nation's surface fleets face off for control of the East China Sea. The JMSDF must maintain sea control in order to protect the maritime trade routes that are its nation's lifeline from interdiction by the PLAN. The PLAN must implement its doctrine of early anti-access measures to delay an offensive response to their operations.

Play The Fool, 2016: US and Chinese naval forces clash in the western Pacific. To roll back Chinese territorial expansion, a USMC amphibious assault is launched against selected outposts in the Parcel Islands, primarily the Woody Island airfield. Get the landing force in place and protect it while the Marines storm the islands.

Tanker Wars, 2017: Thirty years after Praying Mantis, Iran and the USN are at it again. Iran has declared a quarantine on military traffic in the region. The USN contests the blockade and dispatches a small group to enforce freedom of navigation in international waters. Can the LCS prove its mettle on the environment it was designed for?

Splendid George, 1985: Rebel factions in Guinea, aided by the Soviet Union, have staged a successful guerilla campaign against the local government. The US has assigned the Iwo Jima LPH to aid the local military in suppressing the rebels. However, the Soviets are also in the area. To avoid escalation, US forces are on a tight leash: No Soviet forces are to be engaged even if they shoot first.

Kolkata Thresher, 1982: Bangladesh has collapsed into civil war and China has supported the anti-government rebels, hoping to turn Bangladesh into an ally against India. Increasingly, India is frustrated with the situation. It sees China as adding to the political instability in the region and as contributing to the amount of human suffering the civil war in has created. It has warned China that action may be taken against Chinese vessels delivering further military supplies to the rebels in Bangladesh. The time has come to make these warnings real.

Tempest Marlin, 2016: Following a coup, the new military government of Cameroon has put down all resistance with extraordinary brutality. The remaining rebel forces have withdrawn to the coastal town of Kribi. The specter of another massacre looms. Experts fear sanctions will not work, or at least not work quickly enough to prevent tens of thousands of deaths, and the rest of the world has a very unpleasant choice to make: take action against Cameroon now or wait and perhaps be partly responsible for the massive death toll.

The Raisa Affair, 1969: Following the Six-Day War, the Soviet Union rapidly resupplied Egypt with regular arms shipments. Israel frequently intercepted and inspected these cargo vessels. You are tasked with making such an inspection. This could be a routine task.... or it could get ugly real fast.

The Snipe Incident, 1958: In the 1950s, Chile and Argentina were engaged in a dispute over the possession of several islands off the southern coast of Tierra del Fuego. An Argentinian destroyer has been spotted approaching the Snipe lighthouse and Chilean forces are standing by on alert. Will everyone back off? This is often how wars start.

Caribbean Clinch, 1956: The Suez conflict has gone downhill in a big way. The Soviet Union has intervened on Egypt's behalf and attacked Israeli, British and French forces. The US, far from simply reigning in their NATO allies, are now forced to actively participate. Around the world, US forces are mobilizing to engage Soviet and Warsaw Pact forces in their immediate vicinity. In the southern Caribbean, this means your SAG force, centered on the battleship Iowa and the prototype missile cruiser Canberra, is about to taste blood. What are you up against?

Vivid Sentry, 2018: In the near future, tensions between Venezuela and the Netherlands continue to mount. Venezuela repeatedly harasses Dutch vessels and aircraft en route to and from Aruba. The Dutch government attempts to control the situation by moving naval vessels into the region as a "show of force" to demonstrate their commitment to their Caribbean territories. This gives Venezuela the opportunity they have been waiting for.

Salalah station, 1986: The civil war in Yemen has led to the government firing on targets in western Oman. Oman responded by bombing targets in eastern Yemen. Yemen has declared war on Oman and both sides have requested assistance from their allies, the Soviet Union and United States respectively. The Soviets have sent several ships into the area and are using various diplomatic and economic channels to pressure and punish Oman. The United States, having to tread a fine line between insufficient support and uncontrollable escalation, has moved a small task force into the region.

Operation Square Peg, 2013: Although designed as a superlative fighter, the F-22 also has a secondary strike role. How capable is the Raptor in this task? Find out in a time-critical strike against chemical weapon targets in Syria.

Needle in a Wet Haystack, 2009: Think that the USCG counter-drug/smuggler patrols are hard? Step into the shoes of the Ecuadorian coast guard and try to pick out and prosecute the smuggler submarines. And maintain your sanity.

A Day at Red Flag, 1977: The Red Flag exercises introduced in the 1970s brought a new level of realistic training to the American air forces. This early Red Flag features the USAF's fighter squadrons against highly trained Aggressors in a mission to attack a heavily defended target.

Turkmen Bombardment, 1998: The Turkmen government, alarmed by the formation of the new Islamic Emirate of Afghanistan, has ordered airstrikes on enemy positions. There are more opportunities for conventional airstrikes now that a state has formed, and more targets due to the new government moving its heavy units north. Load up those Su-25s and let rip.

Mission 2013D – Part I, 2014: China has staged a series of exercises opposite Taiwan throughout 2013. Is this another one, or the real thing?

Mission 2013D - Part II, 2014: It is now positive: China is attacking Taiwan. Massive waves of Chinese air, surface & subsurface forces are maneuvering and assaulting ROC assets. Can the island fortress hold?

Hungarian-Serbian Border Incident, 2017: Hungary's support for the independence and EU acceptance of Kosovo is (surprise!) coming back to bite it. Hungarian radicals have murdered several Serbs in the border town of Tompa, and the Serbian government has used the incident to steadily rise tensions. The situation is about to get out of control.

Out of Meggido - Team Sunfish, 1973: In response to Soviet threats to intervene on behalf of Egypt and Syrian during the Yom Kippur War, President Nixon has ordered a massive series of attacks on Soviet forces around the world. Nixon is not insane: he is bluffing that the Soviets will be sufficiently rattled to back down from the confrontation. This scenario follows a trio of three frontline US attack submarines as they engage Soviet tactical and strategic submarines in their area of operations.

Out of Meggido - Battle of the Arabian Sea, 1973: As part of Nixon's strategic gamble, the Coral Sea battlegroup is about to engage a large Soviet convoy at the Gulf of Oman. Can this attack succeed without being "too successful" - ie. leading to nuclear escalation ?

Trouble at Trevelyan, 2013: Portuguese fishing boats have repeatedly violated areas near the Trevelyan Escarpment in the Bay of Biscay, which France has designated as a marine preserve to help restore fish populations destroyed by overfishing. France has warned Portugal that it will be forced to take action against Portuguese fishing boats violating the preserve. In response, Portugal has moved a warship into the Bay of Biscay "to observe the situation, to maintain law and order, to preserve the peace, and to protect the rights of Portuguese citizens."

Andromeda at the Ready, 1984: Caught in the crossfire of the "tanker wars" in the Persian Gulf, an English-flagged merchant vessel has been damaged by mines and limps to the nearest friendly port. Iranian forces however believe she is carrying contraband and intend to board her or sink her. The only available British asset in the area is the frigate HMS Andromeda. Can she alone protect the merchant?

The Grecale Affair, 2017: The Italy-Tunisia dispute over the Strait of Sicily heats up again. The Italian navy dispatches the Grecale with air support to monitor Tunisian naval activity and respond to provocations. Sounds simple... except Tunisia is far more committed to this standoff and the Med is full of neutral traffic, so ROEs are tight.

Rebel Yell, 2015: A bloody rebellion in the ranks of the Slovakian army has been largely contained and the remaining rebels have barricaded themselves on an airbase, with modern SAMs and fighters. Can a hastily assembled NATO task force break into the base and recapture it?

SEAL Submarine Exercise, 2010: An exercise for an option that officially the USN "never uses": deliver SEALs to foreign territory and destroy a tactical target.

Facing the Dragon, 2014: An AAW-centric view of a massive Chinese assault towards Taiwan, and a massive brawl in its own right. Not for airwar beginners :)

Team Worden, 1983: Tensions over the ownership of Pratas Island (whose possession dramatically affects the range of legal territorial waters) have risen between China and Taiwan. Intel reports suggest the PRC may be planning an assault on the island to force the issue. To discourage Chinese intentions the USN dispatches a mixed surface/sub force to the area. If the Chinese are bluffing, this token force should suffice. If they're not...

On Stalin's Order, 1945: The ruins of WW2 are still smoldering in Czechoslovakia, and the triumphant Red Army is racing to seize the country's strategically vital western industrial sector. However, western allied forces are still in this area and they won't just pack and leave. Soviet forces are ordered to push ahead regardless. Will the Third World War start while the Second is barely over?

US-UK Fellowship Exercise, 2012: So you stalk Akulas for breakfast? Here's a little exercise to really test your silent-hunting skills. The most modern attack subs of the US and Royal navies go mano a mano with no holds barred. May the best driver win.

Red Episodes: Recon in Force, 1989: Fifth in the "Red Episodes" series of WW3 from the Soviet point of view. Norwegian FAC hit-and-run ambush attacks from the countless northern fjords have been very successful against Northern Fleet forces, so much so that the Kirov SAG has been assigned to root them out of their hiding holes and neutralize them permanently. The Kirov has its main SSM launcher damaged but still leads a powerful surface group. Can it do the job, or are the fjords too tough?

The Old Regime and the New Nation, 1966: Franco's regime is reluctant to abandon its colonial possessions and responds forcibly to provocations from Nigeria. This hypothetical scenario features the combat swan song of the famous He-111 bomber.

Team Mysore, 2017: Tensions between India and Myanmar have continued to mount. Indian intelligence indicates that Myanmar plans to attack Indian-flagged merchant vessels. Available Indian forces, centered around the new destroyer Mysore, are limited and far closer to Myanmar threats than any support. Will they be enough?

Marinha do Brasil - PASSEX 2010 - Carl Vinson, 2010: Based on an actual 2010 exercise. Take command of a Brazilian diesel submarine, penetrate a US carrier group's defences and claim the big prize, the carrier itself.

Growler vs Growler, 2014: EA-18G Growler, the USN's top-line SEAD and electronic attack aircraft. S-400 (NATO: SA-21 ""Growler""), the most modern operational long-range Russian SAM system. FIGHT!

Team Dido, 1964: Based on the historical conflict between Indonesia, Malaysia and the UK. The British government offers increased assistance to Malaysia including two of its RN frigates in the region. But Indonesia may up the ante more than usual this time.

Shangri-la Comes Calling, 1965: In the mid-1960s, tensions increased dramatically between Egypt and the United States. With Egypt threatening maritime traffic in the eastern Mediterranean, the United States has decided to act pre-emptively. An air strike against an Egyptian air base has been selected as a suitable demonstration of American resolve. The Shangri-la carrier group is the nearest available force for this operation.

Memphis Goes North, 1981: During 1981, the submarine USS Memphis completed an around-the-world cruise. This scenario assumes that during this time she was also called upon to assist in the completion of a covert CIA mission.

Helping Brothers, 1990: Egypt is in social unrest and riots due to the ascendance of extreme Islamic elements. The country is on the brink of civil war. The military government try to control of the situation by means of martial law. Libya decides to support the Islamist rebels by supplying weapons and sends a small convoy with supplies for them. Egypt will have none of this.

Frozen War, 2014: Chile and Argentina are at it again over oil exploration in the Antarctica. Can things get hot in the coldest part of the world? Yes, they can.

688 Attack Sub #4: Mumar Cadaver: The Libyan government continues to support terrorist attacks against US interests. You are in command of the USS Los Angeles and have been ordered to sink a Libyan tanker convoy and send a clear message to the errant regime.

688 Attack Sub #8: Surprise Party: Command a deep and fast Alfa-class SSN against an American carrier task force or defend it in a silent, high-tech Los Angeles-class SSN. Prime targets and formidable adversaries.

Baltimore on the Prowl: The years following the 1948 Arab-Israeli war saw numerous attacks conducted by Palestinian terrorists. This scenario assumes that, while the American President had no intention of putting troops on the ground to protect Israel, he was willing to commit naval forces to reduce the smuggling of arms in the Mediterranean

Caribbean Task For Ruby: Post-Cuban Missile Crisis, Soviet and Cuban forces continue to arouse the suspicions of America. Your task force has been sent to investigate and uncover possible tactical missile deployments in this cold war thriller.

Corvette Group off Bressay: It is 2022 and the political cards have shuffled, leaving the UK and Norway to square off in the North Sea. Can you lead British forces to victory or will Norwegians rule the north once again?

Resolution 1737: Command US forces in conducting an opposed blockade in the Gulf against America's perennial adversary Iran. Another hard-hitting scenario from one of the Command community's most prolific scenario writers, Mark Gellis.

Seawolf #1: Ivan Marches: In this Cold War remake of a classic SSN21 scenario, civil war has broken out and US and Soviet forces are moving quickly to support their allies. Command the USS Seawolf in the critical task of shadowing a large Soviet convoy and determining if Soviet missile submarines are on the move.

The Transit: Its 1985, the Third World War has been raging over a week and you are in command of the Spruance class destroyer DD-969 USS Peterson. Your mission is collecting your convoy in Savannah Georgia and getting them to Bordeaux France.

Wargasm: It is 1962 and you are one of the Strategic Air Command's finest. Your job is conducting thermonuclear war against the forces of the Soviet Union. A massive and well-researched scenario. (Note: The corny-sounding title is from authentic declassified nuclear war plans of the era!)

Myanmar Defense, 1995 : An ordinary day in a Myanmar Air Force base commander's life. Ordinary? Maybe.

PN Patrol Force PWS – Shoal Patrol, 2013 : The Philippine Navy has built a new Patrol Force base at Oyster Bay on the island of Palawan. Facing directly into the Western Philippine Sea, it provides easy access to the security zone around the vital Malampaya Oil Fields on the North End, as well as the contested shoals to the West and South. Oyster Bay is now home port for most of the Navy's major combatants, including two former USCG high-endurance cutters and new additions of Navantia-made OPVs. From here, patrols will be conducted to ensure territorial security and reinforce maritime claims.

Submarines off Sao Tome, 2020 : Tensions have increased between China and São Tomé and Príncipe. The tiny African nation's close ties with both the United States and Taiwan, combined with its harsh criticism of some of China's African allies, have made it very unpopular with the People's Republic. Two weeks ago, two Chinese businessmen were targeted by radical anti-Chinese activists and murdered. The Chinese have blamed

the São Tomé government and made it clear that unless their demands for a formal apology (and a softening of São Tomé and Príncipe's stance on China) are satisfied that the situation will escalate.

Task Force 45, 1989 : In 1989, the Soviet Union, although facing severe economic difficulties, made some efforts to support some of the remaining communist regimes around the world. In this scenario, a Soviet convoy with military aid is on its way to Nicaragua. The United States intends to block this convoy. At the present time, the only force available is Task Force 45, a surface group with air & submarine reinforcements.

The Okhotsk Bastion, 1961 : In response to the USSR declaring the Sea of Okhotsk as Soviet sovereign waters, the Kennedy administration has ordered a more aggressive naval policy and flooded the area with submarines. In response, the Soviets have responded with one of their largest anti-submarine operations. This scenario features hypothetical Soviet aircraft carrier and naval aircraft designs being deployed against the American undersea force.

Seawolf #2, Duckshoot, 1996 : US subs and vessels have been ordered to blockade all Cuban ports and patrol the entire Cuban coastline. The goal is to cut supplies and arms from reaching pro-Castro forces on the Island. The Seawolf is to patrol a wide section of the northern Cuban coast. All non-US vessels in this area, are either pro-Castrol naval ships or merchant ships that have ignore our repeated warnings. The Seawolf is free to fire, but only after having clearly identified the target as a non-US naval vessel.

DACEX-14, 2014 : Each year the Spanish Air Force organize a multinational air-to-air combat exercise in the Canary Island. In addition to the local fighter squadron based in the Islands and others Spanish squadrons deploying fighters and support assets, several allied and NATO air forces send different aircrafts. You are the Joint Forces Air Component Commander (JFACC) of the Iberian Coalition and have full authority over a complex combined air component to fulfill just one order: to gain air superiority over the Canary Island. Are you up to the task?

Northern Fury 5 – Bardufoss Blues, 1994 : Day two of a new global war. As commander of Allied Forces North, you are re-grouping your surviving units and bringing in new reinforcements as fast as you can get them. Your available aircraft are severely depleted, your pilots are tired, your ground crews are exhausted, your stock of AAW missiles is draining rapidly. Your grudgingly considering a further withdraw of forces to the South. The situation on land is stable, Soviet ground forces have linked up with the airborne forces at Banak but have not proceeded much beyond that. You must inflict damage and slow the Soviet progress.

Northern Fury 5.5 – Trondheim Express, 1994 : The war has already gone badly. You are commander of Allied Forces North, and the situation went from being bad yesterday to disastrous this morning! You staff have focused on re-grouping your surviving units and bringing in new reinforcements as fast as possible. A major Soviet push this morning has forced your air units South, effectively closing Bardufoss, and Tromso, Evenes is still open but barely. Your heavily depleted air units have scrambled back to Bodo where 3 Norwegian and 1 Dutch F-16 squadrons with the F-15s of the US 493rd FS are attempting to hold back hundreds of Soviet A/C. The one bright spot is the arrival of a British Jaguar and 2 USAF F-16 squadrons. The situation on land is equally bad, Soviet ground forces have linked up with the airborne forces at Banak. Airmobile operation NE of Bardufoss this morning seized the passes and dislocated the units there - Bardufoss will fall in the next few hours, it is already under artillery fire. The Maritime situation is improving marginally, the Norwegian Navy has put to sea and STANAVFORLANT is moving to assist. You need to prevent the Soviet amphibious force from reaching Trondheim.

Battle Ocean '64 – Baltic Convoy, 1964 : This scenario assumes that an anti-Soviet rebellion erupted in Poland during the summer of 1964. West Germany has decided to send a convoy with humanitarian aid to the Polish town of Kołobrzeg, currently the only port in Poland under rebel control. Not surprisingly, the Soviet Union does not want this mission to succeed.

Battle Ocean '64 – North Sea ASW, 1964 : This scenario builds off the events in Battle Ocean '64 -- Baltic Convoy. West Germany's decision in August to send a convoy to aid Polish rebels has had results that concern the international community. While the convoy arrived safely, shots were fired by both West Germany and the Soviet Union, and both sides experienced losses. The Soviet Union has denounced West Germany's action in the United Nations, but its attempt to get a resolution for action in the Security Council was promptly vetoed by the United States and the United Kingdom. Soviet destroyers sank less than a week later, a West German submarine on patrol just outside Polish waters. The submarine had been in international waters, but the Soviets claimed it had made "threatening maneuvers" and has refused to discipline the captain for "considering first and foremost the safety of his ship and his crew, and the interests of his country." NATO countries have warned the Soviet Union that recent events are forcing them to adopt "zero tolerance" policies. Soviet aircraft violating the airspace of NATO countries, and surface vessels and submarines violating territorial waters of NATO countries, "will be dealt with harshly."

Battle Ocean '64 – Teesport Convoy, 1964 : This scenario is part of the Battle Ocean '64 series. It assumes a limited "tit for tat" naval war has erupted between the Soviet Union and some of the nations in NATO. At present, the United States is playing a difficult game of diplomacy, talking with the Soviets to prevent escalation, talking to their allies

in NATO to assure them that if a larger war erupts, America will stand with them. The events leading up to this scenario begin with a German convoy sending humanitarian aid to rebels in Poland in August. The convoy came under attack, but arrived in Poland with minimal losses. Days later, a German submarine was sunk by Soviet forces. A couple of weeks later, in September, two Soviet submarines discovered off the coast of Scotland were sunk by British forces, which then came under attack by Soviet ships and aircraft. Both sides have taken losses; both sides have drawn blood. The Soviet Union has stated that the "vicious and barbaric actions of the West will not be tolerated" and has threatened to attack British shipping headed for Germany. The United Kingdom has declared that such actions will be considered "nothing less than an act of war, and while the Soviets should understand we have no intention of threatening their homeland, neither will we accept any nation's attempt to deny us the freedom of the seas."

Operation Sombrero de Copa, 2000 : Tensions are mounting again in the Falklands. A British radar station being built on West Falkland and increasing Argentine economic difficulties leads to clashes resuming. But this time Argentina opts to use more covert means –specifically, submarine-delivered commandos - to accomplish its goals.

Operation Slam Gray, 1957 : The Dominican Republic was ruled for many years by a brutal dictator, General Rafael Trujillo. In history, Trujillo was assassinated in 1960. This scenario assumes that the assassination took place in 1957, and that in the chaos that followed a pro-Soviet government came to power in the Dominican Republic. The new government was immediately recognized by the Soviet Union, and rapidly given significant military aid. In accordance with the principles of the Monroe doctrine, the US government considered this an intolerable situation. A small task force centered on the carrier Intrepid is assembled to interdict all Soviet-backed forces in the area.

Jean Moulin Rouge, 1994 : This scenario assumes that tensions increased between France and Colombia in the early 1990s. The main cause is that a number of French fishing boats have not respected restrictions in Colombian fisheries and that France has not responded quickly or harshly enough to this problem to satisfy Colombia. The problem took a rapid turn for the worse a few weeks before this scenario takes place when a French fishing boat was stopped for an inspection by a Colombian naval patrol boat; somehow, gunfire erupted and in the ensuing battle two French fishermen were killed and two Colombian sailors were seriously injured. Colombia has clamped down on the number of foreign boats allowed to enter its waters and has started aggressively patrolling the entire Caribbean looking for fishing boats engaged in illegal activities. The French government has decided to keep a close watch on Colombian activities in the Caribbean to ensure the safety and free passage of French citizens living and working in the region.

Old Feuds Have Now returned, 2014 : Instead of a vote for unity, the Scottish have voted for independence. Then the real troubles began. The rise in oil prices was just an illusion, a short one driven by jitters after the Oman-Pakistan war rather than any serious change in supply and demand. Both countries' economies sank after the messy, calamitous split. The pro-UK Shetland Islands held a referendum of their own, and since maritime boundaries determined who could control the resources, this was a problem. Warships were sent, the first shots were fired, and wars between the English and Scots have come back.

Sink The Nautica, 1977 : The Canadian naval forces in the mid-70s have seen some very lean years. All but four of the major surface warships are based upon designs more than two-decades old, the venerable CS-2F Trackers have lost their ASW capabilities and the CP-107 Argus LRMP's are now long in the tooth and overdue for replacement. A Canadian version of the P-3 Orion is on order but delivery of the CP-140 Aurora is still some years away. However, even with the material shortcomings the personnel are well trained and the available "O" Class submarines are worked up and ready. Now there's a general war against the Warsaw Pact and protecting Canadian waters has to compete with NATO tasks for scarce ships and planes. Into this unsatisfactory defensive situation sails an aggressive Soviet submarine.

Operation Charming Truth, 1985 : A coup in Sudan has led to widespread chaos and violence in that country. The Sudanese government believes that some American civilians are organizing anti-government protests, and prepares to crack down – hard. The United States has decided to evacuate Americans from Sudan.

Operation Lawful Destroyer, 1985 : This scenario assumes that a coup has taken place in Tanzania in the early 1980s and that the new government is hostile to Western allies like Kenya. The Constellation carrier group is ordered to neutralize Tanzanian forces by striking at Ngerengere airbase and any targets of opportunity.

Operation Lawful Avenger, 1985 : A variation on Lawful Destroyer, with different weather conditions and enemy compositions & strengths.

Raid on Bir Morghein, 2020 : This scenario assumes that in the near future tensions have increased between Morocco and Mauritania. The situation has been exacerbated by the fact that China has recently sold military aircraft to Mauritania, giving it for the first time in many years a way to control the skies over the disputed area of the Western Sahara.

Terrorists In Anjar, 1984 : An operation that might have been conducted during the war that took place between Israel and Lebanon in the early 1980s. Available IAF air assets at Ramat David AB are tasked with striking at terrorist militia cells deep inside Lebanon, while evading Syrian air defences.

The Escort Division, 1962 : A US Navy Escort Division composed of old WWII Destroyer Escorts manned by hastily recalled reservists brings a supply convoy to an isolated Iceland. Designed as a light ASW/minesweeper mission inspired by the 1962-1963 Jane's Fighting Ships edition. Also designed for maximum replayability with random starting positions for most forces.

Incident at Le Perouse Strait, 2014 : The islands in North of Japan have been always a matter of conflict between Russia and Japan. The Russian Pacific Fleet is deployed near Le Perouse Strait in a exercise which is closely monitored by Japanese submarines. This kind of situations could develop in serious incidents. The scenario features the new Japanese 'Carrier' destroyers with a complement of F-35s against the new Russian naval units.

The Soviet Test, 1964 : The Soviet Union, looking to expand the reach of its naval fleet, has drawn ire from its recent close approaches to the Philippines, Guam and now the Hawaiian Islands. Fearing that the Soviets may uncover the recent nuclear testing at Johnston Atoll, the US places CTF75 in the region to detect and deter the Soviets from encroaching the region and possibly testing their capability of a first strike on the Hawaiian Islands.

Air Battle over Beraf-Kucove, 2020 : A civil war erupts in Albania in 2020. After several months of ferocious fighting, the two sides have drifted into an uneasy cease fire. However, North Albania has used the lull in the fighting to negotiate arms deals with Serbia and Russia. Concerned with the direction the war was taking, and its implications for the region, Greece has sold a number of older Mirage fighters and other military equipment to South Albania.

Those Who Hunt Goblins, 1973 : The Yom Kippur war is in full swing. Both the USN and Red Banner Fleets have rushed naval reinforcements into the Med and with the two navies operating at close proximity, the possibility for accident or opportunity sneak attack is considered very great. For the first time since the 1962 Cuban Missile Crisis the US has set DEFCON-3. The only significant naval force to protect the Eastern Seaboard of the United States is the Intrepid Battle Group with her hybrid air group and ad hoc collection of escorts. This would not normally be an issue but the crisis in the Med has siphoned off most of the SSNs that normally track and trail the Soviet SSBNs operating in the Western Atlantic. The plots for at least two Soviet Yankee-class ballistic missile submarines operating near the American coast have been lost. Can the Intrepid group re-acquire the boomers and keep tabs on them without further escalating the standoff into a possible WW3?

Red Flag, 2017 : Red Flag is a world famous exercise held multiple times per year at Nellis AFB, Nevada. It is the "mother of all Flags" and features everything a fighter pilot can wish for in an exercise: dedicated adversary fighters, lots of SAM transmitters, good airspace, and plenty of live bombing targets. It focuses primarily on fighter aircraft working together in COMAO packages to accomplish challenging objectives. Two missions (one day, one night) are flown each day for two weeks, with various assignments, such as Defensive Counter Air, Air Interdiction, Escort, Dynamic Targeting, combinations of the above and more.

DCA Mini-EX, 2012 : A joint air-defence exercise pits the combined USAFE / Danish AF forces against OPFOR invaders from the Scandinavian north.

Death of the Belgrano, 1982 : After following the ARA General Belgrano task group for one day and four hours, the British nuclear submarine HMS Conqueror receives permission from the Royal Navy Command to intercept and sink the Argentine cruiser. If possible, his escorts too. The green signal was given.

The Fighter-Bomber Aviation Regiment, 1987 : You are the regimental commander of the 236th APIB, an elite Soviet MiG-27K regiment stationed in Hradcany-Mimon Air Base, Czechoslovakia. You have just been given your top-secret orders: War has abruptly broken out, without prior warning. According to established warplans, your assigned targets are a range of high-priority NATO installations. You have one hour to prepare your first airstrike of the war.

Many of the new scenarios, as well as some rebuilt versions of existing ones, make extensive use of the new v1.06 features.

Boston's Battle, 1963 : This is an "alternate" scenario to Boston's Brawl, 1963. The assumption is that the American Surface Action Group centered around the Boston is on patrol off the coast of West Africa, instead of being in the South Atlantic, and is called upon to destroy a Soviet Surface Action Group.

One Final Old-fashioned Banana War, 1947 : An economic slump in Mexico following the end of the WWII commodity boom leads to political unrest in the country, and thus the US military finds itself heading south once again, this time at the request of the Mexican government.

Best of the West, Worst of the East, 1982 : Thanks to recently-declassified documents we now know that, had the Cold War escalated to a superpower conflict, the Soviet Navy would preferably keep its modern nuclear submarines in close escort to their all-important strategic missile subs in their bastions, and instead send their modern diesel subs to interdict NATO resupply lines. So as the turbulent early 80s spin up to a bonafide crisis, the Red Banner Northern Fleet's diesel sub force puts out to sea to challenge NATO's awesome anti-submarine screens..... and you are in command.

Rollback - The First of Many, 1998 : The US military attempts to get rid of Saddam Hussain's regime via a number of active measures, first and foremost being a series of carrier-launched strategic strikes. This hypothetical scen features the A/F-117 "Seahawk", a carrier-suitable variant of the F-117 that was nearly adopted by the US Navy in the late 90s.

Rollback - Hoisting the Net, 1998 : In addition to airstrikes, the US Navy took other measures to isolate the Hussain regime, one such being the identification and interdiction of supplies headed for Iraq. The USS Denton has been tasked to identify and seize a large container ship enroute to the port of Latakia. Will this be a run-of-mill call?

Birmingham Strikes, 1992 : Sierra Leone has plunged into a brutal civil war with the deaths of tens of thousands. The rebels, known as the Revolutionary United Front (RUF) were infamous because of the atrocities they committed. The RUF captured a large number of weapons from Sierra Leone (and later from some of the UN peacekeepers dispatched to the area), but received further assistance and material from outside countries such as Libya. In this not-so-hypothetical scenario a small British task group centered on the destroyer HMS Birmingham is tasked to disrupt RUF operation in its vicinity.

Caribbean March 21st, 2022: Venezuela has attacked the islands of Curacao and Aruba and occupied them. The Dutch government has launched a counter-offensive to retake the islands. You are in command of the Dutch TF and the Air Force Base at St. Maarten, stocked with new F-35s. But Venezuelan forces are similarly upgraded with fresh Chinese equipment. Can you take the islands back?

Carrier Battle Group ASW Test, 1984: It has been said that a carrier's biggest threat is not aircraft, but submarines. Time to put this theory to test. Multiple Soviet submarine threats are expected in the path of a CVBG. The CVBG needs to transit the area and defend itself at all times.

Etendards in Her Majesty's Face, 1982: The Falklands conflict has gone on longer than it did historically. Having run out of Exocet missiles, the Argentines now prepare their Super Etendards for an attack on the British task force using conventional bombs.

The Irish-Spanish Fish War, 2015: Tensions have increased between Ireland and Spain. Ireland has responded by closing its Exclusive Economic Zone (EEZ) to Spanish fishing boats. However, there have been reports of Spanish trawlers continuing to fish in Irish waters, and that Spain has even sent military vessels to make sure its fishing boats are not harassed. Ireland, not surprisingly, considers this a breach of international law and a gross provocation.

Mission of the Ile De Sein, 2015: The waters surrounding Île de Sein are part of a protected seascape lying within France's 200-mile Exclusive Economic Zone (EEZ). The responsibilities the French navy include protecting these natural resources from poaching, illegal dumping of chemicals, and other threats. This authority is now being challenged by Russian organized crime.

Regulus, 1961: The Berlin Crisis is smoldering. Sneak a Regulus missile submarine through the Kurils and be prepared to conduct a nuclear strike on the industrial sites in Komsomolsk-na-amur. Naturally, Soviet forces in the area are on high alert.

The Battle of Mitu, 1995: This scenario assumes that violence from the FARC conflict with Colombia has spilled over into Brazil. Brazilian citizens have been kidnapped and killed. Among other crimes, FARC is blamed for the brutal murders of a Brazilian police captain and his family. FARC currently occupies the Colombian town of Mitú, close to the Colombia-Brazilian border. Brazil has decided to raid this FARC stronghold.

The Battle of Seogeom-Ri, 2015: South Korean and North Korean forces are clashing again. At stake is the South Korean island of Seogeom-ri, which lies close to the border between the two countries.

The Five Powers, 2020: China has been aggressively pushing its territorial claims in the South China Sea for over a decade, by the late 2010s it has begun to push those claims ever farther to the south and east. In response the Malaysia activates the Five Powers Defense Agreement; with Singapore, Australia, and New Zealand immediately retasking forces to the assistance of Malaysia, and the UK promising support as soon as possible. Can the Five Powers stem back the Red Tide? (NOTE: A highly entertaining AAR of this scenario can be found [here](#))

The Mohéli Crisis, 1999: A bloodless coup took place in Comoros in 1999. This scenario assumes the coup was more violent and chaotic. Rebels have seized control of the island of Mohéli. French nationals living on the island have been taken hostage and the rebels are threatening to kill them unless their demands are met--the rebels believe that France will pressure other factions in the Comoros in order to protect their citizens. As might be expected, France has taken a dim view of these actions and is mobilizing.

Probe of Feint, 1963: As Red China edges closer to a usable nuclear weapon, many actors, including the United States, watch with increasing alarm. Eventually pre-emptive action is decided upon - but in a way that will not be obvious...

Water Wars, 2017: For over 100 years Bolivia has tried to reacquire territory lost to Chile in a series of conflicts in the late 19th century, particularly the valuable province and port of Antofagasta, which provides access to the Pacific. In December of 2015 the ICJ delivered a shocking verdict that Chile had illegally acquired the land from Bolivia and must provide them sovereign access to the sea in the form of a "national corridor"

some 20kms wide. Chile immediately responded negatively. In retaliation, Bolivia built a dam diverting the Silala river, a waterway vital to Chilean economy. The matter will no longer be settled on the courts or negotiating tables...

Angamos Goes The Distance, 1980: A Peruvian submarine must conduct a covert extraction of Peruvian government personnel (i.e. spies) from Chile. The Chilean navy will shoot unidentified intruders first and ask questions later.

Andaman Sea Clash, 2005: In 2004, tensions between Thailand and Myanmar increased. During the summer of that year, a Thai fishing boat was sunk by a Burmese patrol boat. Seven months later tensions have remained high and Thailand has started to conduct regular patrols in the Andaman Sea to protect Thai fishing boats. Myanmar has not protested this action, but has made it clear that it will not tolerate Thai fishing boats violating its territorial waters or its protected fisheries.

Operation Fei Lian, 2019: The balloon is going up in the Korean peninsula - but it's not the conflict that everyone planned and prepared for. Radical elements of the North Korean military are attempting a coup, and back-channel talks with the Chinese leadership lead to Beijing decide to support the rebels. As the General in command of the Shenyang military district, you are ordered to destroy the North Korean air force as well as the NK "strategic" nuclear forces, using the PLAAF assets in your command.

They Came From The Museum, 2015: Soviet/Russian tactical aircraft have a long history of 'inexplicably' showing up in various conflicts under the hands of 'rebel', 'advisor' and otherwise non-official pilots. This scenario assumes that the "little green men" in Ukraine take this strong tradition one step further and piece together a hodgepodge air force from various odd sources, including a number of exhibits from the Luhansk Air Museum. How will these Cold War cast-offs and their mysterious pilots fare against Ukrainian air defences?

The Battle of Langkawi, 1973: By 1973, the communist insurgency that erupted in Malaysia has taken control of most of the state of Kedah. They have captured a number of artillery pieces, armored cars, and other military equipment, including a number of aircraft. An international coalition, led by the UK, and including forces from Australia, New Zealand, and Singapore are assisting Malaysia in its fight against the insurgents. However, the Soviet Union, China, India, North Korea, and Cuba have all recognized the self-declared People's Republic of Kedah - and will actively assist it against blockades of its ports in the Kedah region, including the island of Langkawi.

The Clash Of Titans II, 2018: India started the year with intensive naval activity in both Indian Ocean and Arabian sea. The brief Indian incursion into littoral waters of French island Reunion was condemned by French diplomacy. Further diplomatic tension eventually resulted in a double embargo between France and India. A week ago, the French CVBG led by the Charles De Gaulle CV left Toulon naval base and headed to Suez.

INS Vikramaditya with its escorts was ordered to head towards the Gulf Of Aden. Politics will continue by other means from now on.

Closing the Kurile Gap (The War That Never Was) - US, 1989: The Soviet Pacific Fleet would have faced a difficult problem with geography if the Cold War ever went hot. Their largest base, Vladivostok, faces the Sea of Japan. Any units transiting to the Pacific either need to pass through the narrow Tsushima Strait, flanked by likely-hostile South Korea and Japan, or they need to head northwest and pass through the disputed Kurile Islands. The other major Soviet naval base, Petropavlovsk, opens to the Pacific. However, it is located at the end of the remote Kamchatka peninsula and has long, vulnerable supply lines. This scenario examines the Soviet Pacific Fleet's ability to break out through the Kuriles, and the US Navy's role in plugging the gap.

Closing the Kurile Gap (The War That Never Was) - USSR, 1989: The Soviet side of the above scenario.

Those Who Face Death, 2014: In this hypothetical "from the headlines" scenario ISIS has captured much more intact military equipment from the Iraqi and Syrian Armies; they also have the technical capabilities to put it to use. Expect to see American, Iraqi, Syrian, Iranian military equipment. You are hunting a convoy of artillery and APCs heading to Mosul from the south before turning west towards the Yazidi camp at Mount Sinjar. You will need to airdrop supplies and parachutists to the Yazidi camp to achieve success. You are sending British and American aircraft from bases in Turkey, Kuwait, and Cyprus.

Log Bridge, 1989: World War III has been raging. The fighting over Keflavik has been so heavy that what remains of the airfield, currently held by NATO, is unusable. At the same time, the fighting in Europe has placed demands upon available resources that preclude either side sending long range aircraft to attack or defend Iceland. The fate of Iceland will therefore be decided by a decisive surface battle. The big guns are coming out - literally.

Nuclear Storm, 1991: Desert Storm is underway, and the unthinkable has happened: Saddam's forces have launched chemical attacks on coalition troops, with significant casualties. Now a retaliation is in order - to illustrate within limits that some lines are not to be crossed.

No Time for Mischief, 1995: Mischief Reef is in a disputed area of the South China Sea. In 1995, China angered the Philippines by occupying the reef and constructing structures on it, ostensibly as shelters for fishermen. In history, the matter did not escalate into violent confrontation. This scenario assumes the government of the Philippines has taken a more aggressive approach, assuming that if worst comes to worst they will be backed up by the United States.

Busy Day in Burundi, 1976: Widespread unrest has followed a sudden coup in the country, with rebel groups gaining control of military equipment. With the toll of civilian deaths increasing, an international coalition led by France and the United Kingdom has positioned itself to take action. SAS teams on the ground must cooperate with air support to hunt down rebel strongpoints.

Homerun, 1956: From 1952 onwards, RB-47 recon variants of the new B-47 Stratojet bomber started overflying the north of the Soviet Union in photo-recon and ELINT missions. By the mid-50s these flights were getting to be really hazardous as Soviet air defences were becoming both more capable and more aggressive. This is such a mission.

Indonesian War #1 - Convoy Lion, 1995: In the 1990s Indonesia became increasingly aggressive about protecting its territorial rights, hunting down rebels in various provinces etc. Its occupation of Timor has been marked by increasing reports of violence and oppression. This includes an effective blockade of the island, which has led to shortages of food and medicine. The British Parliament voted to support "all reasonable efforts including the use of force to compel Indonesia to allow humanitarian aid to reach Timor." The Australian government passed a similar measure the same day and Australia has been given operational control of the mission. A hastily organized convoy escorted by British and Australian naval units is now en route to the island of Timor. Indonesia has responded by stating that attempts to enter its territorial waters without permission will be treated as an act of war.

Indonesian War #2 - Air Battle Over Java, 1995: Indonesia attempted to stop the joint Australian-UK convoy and hostilities took place on April 17, 1995. As a result, the British and Australian governments have decided to eliminate Indonesia's ability to attempt further attacks against their ships and aircraft. The first and perhaps most important step in achieving this goal is to cripple Indonesia's air force.

Indonesian War #3 - Spartan Goes Hunting, 1995: After inflicting serious losses on Indonesia's navy and air force, the governments of Australia and the United Kingdom have decided to employ commerce raiding to put economic pressure on Indonesia and force them to sue for peace. As part of this, the nuclear submarine HMS Spartan been given a free hand.

Better Bullets (AMRAAM), 1987: With development of the AMRAAM missile undergoing the all-too-common teething problems, an exercise is being held to justify its importance. This is an exercise presenting the possibility of a hostile air power using a similar missile against the USAF. The opponent is armed with advanced AMRAAMs and crewed by expert pilots, so expect a brutally difficult fight.

Better Bullets (SARH), 1987: With development of the AMRAAM missile undergoing the all-too-common teething problems, an exercise is being held to justify its importance. In this variant the opponent is armed with SARH weapons only (like the AIM-7 and AA-10) and crewed by expert pilots, so expect a difficult fight.

Kuril Islands, 1999: Japan has established a major seabed-mining operation 20 nmi west of the island of Kunashiri. Hostilities between Japanese Maritime Defense Force (JMDF) and Russian forces have broken out over economic rights concerning the Kuril Islands. Russian Naval forces have established a formidable blockading surface and submarine units also supported by several squadrons of long range strike aircraft based out of airfields. You are in tactical control of all U.S. forces which include USAF land-based aircraft and JMDF forces in the area. You must defend your forces against attack and take control of as much territory as possible, until a United Nations settlement can be negotiated.

Offensive CAP Belarus, 2015: Backed by Russia, Belarus has invaded Poland's eastern provinces in force. Further Russian forces will be brought into action when the Belorussian Army's offensive stalls. The USAF 555th Fighter Squadron (555 FS, 24 F-16C) and the Polish 40th Tactical Squadron (40.ELT, 24 Su-22M4) have been tasked to strike key logistic and support sites in Belarus to complicate enemy reinforcement efforts. They will be supported by a NATO E-3 Sentry and four EA-18Gs from the US Navy's VAQ-139. Your task is to provide air cover for the operation using the 18 Typhoon FGR.4s of 1 Sqn RAF. Enemy air activity is expected to be heavy.

Bay Of Bengal, 1999: India has mobilized amphibious assault forces again Sri Lanka. The US embassy in Sri Lanka is urging all Americans to leave the country. The Indian CVBG is operating in the Gulf of Mannar. Russia and China have deployed naval bombers to India. Indian submarine activity in the region is significant. Sri Lanka fears Indian military buildup in preparation to final invasion force and collapse of the government. The United Nations has requested that a U.S. CVBG be sent to the area to stabilize the region. All Indian naval forces are considered hostile.

Operation Black Buck 1, 1982: The Falklands conflict begins in earnest. As the Royal Navy Task Force arrives to enforce a 200nm exclusion zone around the islands, RAF Vulcans fly the longest-range bombing mission in history to date, to fire the opening shots of the war.

April Storm #1 - The New Eastern Front, 1996: Boris Yeltsin was removed from power in late 1995. His replacement, a former general in the Red Army, has set an aggressive tone for the new Russia. In the first week of April 1996, Russia and Belarus invaded parts of eastern Poland. About one quarter of Poland is now under Russian control. The UN has been unable to effect any change. NATO has warned Russia that the current

situation is intolerable and that it must withdraw from Poland or face serious consequences.

French Forces in the Gulf of Sidra, 1981: France frequently skirmished with Libya in various flashpoints in northern Africa (e.g. Chad) during the 1980s. In this hypothetical scenario, Libya raises the stakes by directly attacking a French naval task group in the Gulf of Sidra.

Boston's Brawl, 1963: Hostilities broke out between NATO and the Warsaw Pact in late 1963. A small force centered on the missile cruiser Boston is tasked with prosecuting all WP forces in its patrol area, between the Falkland islands and Argentina.

Saudi Arabia Crisis - Attack of IS, 2016: The IS terrorists control Yemen and part of Somalia and Saudi Arabia. Western forces are massing on Israel, Oman and Kuwait as a prelude to invasion of Saudi Arabia to counter the IS. But Iranian-backed elements within IS have one more card to play...

Battle of Yavin, 1980: A plucky, rag-tag, and surprisingly well armed band of rebels has identified a weakness in an Imperial battle station. You're one of the pilots flying fighter cover for the attack. Good luck!

Benny's Sweep, 1958: Pro-Communist rebels operating in the Philippines have seized control of part of the island of Luzon. Worse, the rebels are receiving aid from the Soviet Union, which hopes to trigger a Vietnam-like civil war in the Philippines. The situation is intolerable to the United States, but at the moment other international obligations mean that the only forces available to assist the government of the Philippines is a small task force based around the aircraft carrier Bennington.

Kitty Comes To Kamchatka (The War That Never Was), 1989: Petropavlovsk is the only major Russian naval base that opens directly to the Pacific. That fact, plus its proximity to Alaska, made it a prime NATO target during the Cold War. This scenario, based upon the book by Michael A. Palmer, examines the ability of a single Carrier Task Force centered on the USS Kitty Hawk to attack and neutralize this important facility.

Meteors Over Korea, 1952: A fictional raid conducted by Australian forces against the port of Haeju during the Korean War. When Australian forces, flying Gloster Meteors, first encountered North Korean MiG-15s, they suffered significant losses. Following this, the Meteor was used primarily as an attack aircraft rather than as an interceptor. This scenario assumes that no other forces were available to assist the Australians during this mission and that, for this reason, the Meteors from No. 77 squadron were employed both as attack and as escort aircraft.

Northern Fury 6 - Keflavik Capers, 1994: War started Sunday and Keflavik was one of the first targets, a surprise missile attack which closed the two main runways and destroyed seven aircraft on the ground. You need time to reinforce and get the base onto a real war-footing. You must inflict damage and slow Soviet progress. Critical to success is the evacuation of non essential personnel and civilians.

Northern Fury 7 - Plug the Gap, 1994: Steaming North as the fourth day of a new global war opens, you are in command of the HMS Invincible Task Group, and are heading into harm's way! Dawn yesterday saw an amphibious assault around Trondheim. It looks like the Norwegians with the able help of 3 Royal Marine Commando Bde are holding, but pressure from the north is forcing the Norwegian Army to collapse southwards. Narvik fell late yesterday afternoon. STANAVFORLANT is withdrawing in tatters with the remaining surface units of the Norwegian fleet – they are out of it for a bit. Reports from Iceland are vague but it appears that Spetsnaz forces have captured several out-ports and key radar installations have been knocked out. Critical to success is the transport of two parachute battalions to establish initial defences in the Shetland and Faroe Islands.

Northern Fury 8 - Hold the Line, 1994: You are the commander of the USS Enterprise CVBG, (CVN-65). Due to heightened tensions, your refit/re-fueling was rushed through and completed 8 months ahead of schedule. On the 12th of Feb, while completing your workup trials off of Puerto Rico, you were sent a FLASH message to precede north at best possible speed. Just before midnight last night you received a warning order from CINCLANT informing you of some late developments – including the fall of Iceland. Your orders were to position the TG north east of Newfoundland and prepare for heavy engagement.

Phoenix of Indochina, 1949: The Japanese ship Hosho was a vital pioneer in naval aviation, being the first ship built as an aircraft carrier. Miraculously surviving World War II, she was historically converted to a transport and then scrapped. In this scenario, the Hosho was given to France as a war prize, and her new owners, faced with a war in Indochina, have wasted no time in putting her to use. Here the Hosho (renamed in a new language that keeps the original meaning) now fights over Haiphong.

Russian Civil War (Jane's F/A-18) - Phase I, 2004: Due to severe economic downturns and the collapse of the former Soviet Union, the political and military leadership in Russia has splintered into two discrete factions. The result of these divisions is an armed civil conflict. The political and security interests of NATO members and the western world preclude a return to Soviet-era leadership in post-Soviet Russia. In response to this threat, and to a request for assistance by 'Blue Russian' forces, NATO and the United States NCA have dispatched the USS Ronald Reagan Carrier Strike Group to the

waters north of the Kola Peninsula. Although overt hostilities have not yet begun against 'Red Russian' forces, they are imminent.

Russian Civil War (Jane's F/A-18) - Phase II, 2004: During Phase I of the campaign the Reagan Strike Group conducted a systematic attrition of Red Russian air assets and integrated counter-air defenses on the Kola Peninsula. In Phase II, the strike group will perform the function for which it was deployed here: to prevent rebel forces from obtaining and using WMDs or their delivery vehicles.

Russian Civil War (Jane's F/A-18) - Phase III, 2004: The USS Ronald Reagan Carrier Strike Group was deployed to the waters north of the Kola Peninsula to defeat the threat of Red Russian forces obtaining WMD's and their delivery vehicles. During the first two phases of the operation, the strike group rolled back Red Russian integrated air defenses on the Kola Peninsula and conducted operations to destroy and/or deny various WMD assets to Red Russian forces. With Blue Russian forces obtaining the upper hand and rapidly moving north, the strike group intends to accelerate the Red Russian collapse by attacking their logistics lines and forces from the rear, coupled with an amphibious raid by the USMC in order to further demoralize the rebel leadership and perhaps draw forces away from the Blue Russian advance.

Uncle Mark's Tutorials #1 - NATO Surface Group vs. Soviet, 1985: World War III has started in 1985, and you are in charge of a small surface action group (SAG). Your job is to hunt Soviet ships and submarines and destroy them before they can get out into the Atlantic ocean, where they could threaten NATO convoys. Your forces consist of three warships--a British destroyer, a Dutch frigate, and a German frigate. You also have three helicopters for scouting the seas ahead of your ships and for hunting submarines.

Uncle Mark's Tutorials #2 - English Jets over Uganda, 1973: In 1972, Idi Amin broke diplomatic relations with the UK and nationalized several British companies operating in Uganda. This scenario assumes that following this a series of incidents have led to increased hostilities between Uganda and the UK. The UK has decided that a show of force is necessary. Kenya has provided the UK with access to one of its air bases. You are in command of a strike force formed from detachments from a number of RAF squadrons. You have three basic missions. You are to first cripple the Ugandan air force in the sky and gain air superiority. You are also to fly reconnaissance missions over Entebbe. Finally, you are to conduct air strikes against selected ground targets.

WEC Davos Attacked by Terrorists, 2016: The World Economic Forum (WEC) is hosted every year in Davos, Switzerland, and attended by numerous political, diplomatic and industry leaders. This year, anonymous threats of a terrorist attack on the event have prompted heavier-than-usual security measures by the local authorities, including the Swiss police and army as well as support by Austrian and NATO air forces.

Black Tiger I, 2015: The last remnants of USMC Afghanistan veterans are returning to CONUS and transiting the straits of Hormuz, along with the Carl Vinson CSG. But a covertly Russia-backed Iran is determined not to allow safe passage.

Black Tiger II, 2015: Earlier today, a section of Superhornets was forced to intercept and drive off Iranian MiGs that flew out over Gulf waters to harrass and 'thump' a maritime patrol plane. As the excitement of the morning fades and night falls, there are growing indications that fresh trouble may be brewing...

Black Tiger III, 2015: In the past two days, several incidents have increased tensions to the boiling point. Iranian fighters have harrassed U.S. maritime patrol aircraft and flown aggressively in the airspace surrounding the two naval groups. Even worse, several missile-armed gunboats fought a surface action against the 5th Fleet on the night of February 6th. Although Iran claims that the boats were manned by Al Qaeda insurgents and that they had nothing to do with the incident, intelligence sources believe the craft involved were actually Iranian naval units flying under false colors, and the diplomatic fallout hasn't stopped yet. This afternoon, Carrier Strike Group 3 will stand on station just west of the Strait of Hormuz, watching tensely as the Tarawa group makes the transit.

Black Tiger IV, 2015: In the past two days, several incidents have increased tensions to the boiling point. Today the USS Carl Vinson and her escorts plan to transit the strait behind their amphibious group, but they have no idea the horror that awaits them. For decades, it has been nothing more than a respect for the strength of the United States that has kept the Strait of Hormuz open to the world. With Iran on the brink of becoming a nuclear power and with the windfall of top line military equipment they have obtained, the time has come for the regional balance of power to shift decisively. The Iranians are planning to hand the United States Navy the most crushing defeat it has ever seen, seize control of the Persian Gulf - and hold it.

Black Tiger V, 2015: Bolstered by a new secret alliance with Russia and the influx of a wealth of modern aircraft and weapons systems, the Iranians have executed their plans to become a nuclear power and seize permanent control of the Persian Gulf region. A surprise attack on US ships transiting the Hormuz has resulted in heavy casualties and effective blocking of the straits. Iran capitalyzed on the ensuing confusion and temporary paralysis to successfully test its first nuclear weapon and declare itself a nuclear power. Now the U.S. Navy plans to carry out an operation to re-open the straits and restore freedom of navigation in the Persian Gulf. For this operation, a couple of USN late Cold War projects, the F-14E Tomcat 21 and the AIM-152A AAAM missile (the replacement for the Phoenix) are coming out of the mothballs.

Trans-Atlantic Convoy Duty, 1985: WWII has broken out in Europe with the classic Soviet thrust through the Fulda Gap. Unfortunately, the Soviets have also managed to take Iceland, taking effective control of the GIUK gap and leaving the northern convoy routes exposed and vulnerable. Defend the convoy and your battle group from Soviet attack.

Facing the Bear (The War That Never Was), 1989: Northern Norway may have been the most important theater in the world if the Cold War ever went hot. US reinforcements had to be shipped across the Atlantic in convoys of slow transports vulnerable to Soviet submarines and long-range naval aviation assets. The outcomes of the titanic battles in Germany were completely dependent upon a much smaller battle that would have unfolded in a sparsely-populated, harsh Nordic environment. This scenario, playable from the Soviet side, tries to capture the first stage of that battle.

Comte De Grasse's Squadron, 1988: World War III has broken out. Limited-scale chemical and tactical-nuclear exchanges have been performed, but so far confined strictly to the Central Front and at sea. During these first few critical days of the war, one of the goals of the American navy is to secure the vital sea lanes of the Atlantic so that convoys will be able to resupply NATO forces in the coming weeks. As part of this effort, a task force centered around the American destroyer Comte de Grasse has been assigned to patrol the waters near the Azores.

Uncle Mark's Tutorials #3 - Yorktown in the Gulf of Sidra, 1985: Libya has long made the claim that the entire Gulf of Sidra is its territorial waters, as opposed to the normal 12-mile limit prescribed under the United Nations Convention on the Law of the Sea (UNCLOS). The US is sending a message by deliberately moving its ships through what the rest of the world considers international waters. This time the Aegis cruiser Yorktown, damaged from a recent explosion but still battle-worthy, has drawn the lot.

Kingdom Come, 2018: Following an abortive assassination attempt on the King of Saudi Arabia, compelling links between the assassins and the Egyptian national intelligence agency, the Mukhabarat, quickly came to light. In the ensuing furor, diplomatic attempts to resolve the crisis between the two countries failed as each side dug in their heels. The Saudis would tolerate nothing less than having the responsible parties delivered to them immediately, while the Egyptians were still reeling from the realization that the Mukhabarat had initiated such an outrage without official sanction - but to save face would not admit so. With only hours to go before the deadline of the Saudi's ultimatum, the Egyptians came to the conclusion, under the circumstances, that war was the more tenable option. The Kingdom would oblige.

Sinking A Battlewagon, 1990: With the construction of the Kirov-class battlecruisers, the US Navy once again faces armored, large enemy combatants. This experiment, with

an Iowa as the target, tests the effectiveness of submarine weapons against such targets.

Attack Sub Duel Off Hokkaido, 2003: This scenario assumes that tensions have increased between Japan and Russia. Japanese Coast Guard vessels have fired on Russian fishing boats that have strayed into Japanese territorial waters. Russia has threatened to attack Japanese shipping in retaliation. The submarine Harushio has been ordered to support a surface group transiting to Nagasaki. Russian attacks are highly likely.

First Battle of Donetsk Airport, 2014: On May 16, 2014 the Ukrainian government started an anti-terrorist operation against pro-Russian insurgents in the Donetsk Oblast in early April 2014. Pro-Russian protesters and insurgents affiliated with the DPR captured and occupied numerous government buildings, towns, and territories in the region. In Donetsk city itself, many government buildings were under separatist control. During the morning of May 26, pro-Russian insurgents captured the terminal buildings of Donetsk International Airport, and demanded the withdrawal of government forces from the area. Soon after, Ukraine issued an ultimatum to the insurgents, demanding they surrender immediately. This was rejected, causing paratroopers to launch an assault on the airport, accompanied by airstrikes against insurgent positions.

Here, There And Everywhere, 1965: On July 24, 1965 an F-4C flying CAP over North Vietnam was shot down by a Russian-supplied SA-2 missile. This was the first attack by SAMs on US aircraft and the shootdown took Washington by surprise. A reprisal raid was decided. On July 27 a large raid of F-105s was launched against the sites and nearby barracks where the SAM crews were living. The costliest yet day of the Vietnam air war was about to unroll.

Northern Fury #9.1 - Eisenhower Moves North, 1994: Entering the sixth day of WW3, the situation in the North Atlantic remains desperate. The rapid capture of North Norway and Iceland have allowed the Soviets to surge almost 100 submarines into the Atlantic. The Enterprise CVBG spent two difficult days blunting an attempt by the Red Banner Northern Fleet to interdict the sea lanes, she is now retiring, as are the major Soviet surface units, to replenish. Now, as Enterprise steams south, the USS Eisenhower, after three days of hard fighting in the Mediterranean, has passed through the pillars of Hercules and is heading north. She and the Carl Vinson CVBG will strike at Soviet forces around Iceland three days from now.

Northern Fury #3 - Dagger To The Heart, 1994: A quiet Sunday morning in New York Harbour, it's cold and windy and the main topic of conversation at the Sandy Hook, New Jersey Coast Guard Station is the ongoing fiasco at the Olympics...

Scenario Editor Tutorial - Adding Weapons, 2015: Unlike other Command scenarios, this is intended to be played in scenario-editor mode. In this scenario, the player will add aircraft to an airfield, arm the aircraft, and then shoot down an easy target.

Uncle Mark's Tutorials #4 - Boston Guards the Denmark Strait, 1985: Hostilities have broken out in Europe. The war is only a few days old, but there has been limited use of chemical and tactical nuclear weapons, and American vessels have been cleared to use nuclear depth charges against enemy submarines. You are in command of the American nuclear attack submarine Boston. You have been assigned to patrol the Denmark Strait, which lies between Iceland and Greenland. Controlling the Denmark Strait would be vital in any conflict between NATO and the Soviet Union (or, today, Russia) as it connects the Norwegian Sea with the rest of the Atlantic Ocean.

Uncle Mark's Tutorials #5 - Motozintla Incursion, 2015: Existing tensions between Mexico and Guatemala have increased in recent months. Matters came to a head when Mexican forces fired on a Guatemalan fishing boat that had strayed into Mexico's territorial waters. Accounts of the attack vary, but it appears that the fishing boat had initially refused to surrender to Mexican forces and had attempted to flee back into international waters. However, many believe the level of force used by Mexico was excessive. With Mexico's military already spread thin trying to keep the drug cartels under control, there is concern that Guatemala will launch some kind of punitive expedition. This scenario is designed to give players practice with air power vs. ground forces situations, on a low-intensity conflict.

Waller Takes Charge, 1955: Hostilities erupted between NATO and the Soviet Union in 1955. The war is less than one day old, and both sides have taken terrific losses in the Mediterranean. It falls to the American destroyer Waller and forces attached to her to seize control of the waters south of Crete.

War of the Thirty-Fives, 2021: The Kurds have finally secured independence, and a windfall of now-rising oil prices and the investment opportunities that have come with formal recognition have allowed their (not entirely unjustifiably) paranoid leaders to embark on the kind of military overbuildup that has not been seen for a while. Among this buildup is a new air force, built from the ground up. With Western purchases coming with far too many strings attached, they have obtained a massive number of the most advanced Fulcrum variant, the MiG-35. Unfortunately, the Kurdish political problem has continued in Turkey, with emboldened Kurdish fighters in that country's east increasingly using their neighbor as a sanctuary. Clashes are an unfortunate routine. Now Ankara seeks to break the stalemate by using their finally-ready fifth generation stealth F-35s. But stealth or not, superior technology or not, the Kurdish government is prepared to defend its territorial integrity....

Biddle's Team, 1982: Three weeks after the assassination of Anwar Sadat on October 6, 1981, Egypt has slipped into political chaos. A Soviet surface group is currently en route to offer support to the pro-Soviet faction now struggling for control. The United States, however, has recognized a pro-Western faction as the legitimate government of Egypt, and has no intention of allowing Egypt to turn into a Soviet puppet state.

Biddle's Quandary, 1982: The Middle East has become increasingly unstable since the assassination of Anwar Sadat in 1981. Egypt has avoided total collapse, but militant groups have been responsible for numerous acts of terrorism in the last several months. Evidence suggests that Syria and Libya have been sponsoring some of these terrorist groups. The US has moved some of its ships near Syria as a show of force, hoping the proximity of American military might will discourage further acts of terrorism. Egypt has sent one of its patrol boats into the area as well. Syria, however, has responded by threatening to attack any vessel that violates its territorial waters.

Biddle goes to Algeria, 1984: Tensions have increased between the United States and Algeria in the early 1980s. To increase presence in the region, a small force centered on the cruiser Biddle is tasked to patrol defensively off the Algerian coast, screened by RAF aircraft from Gibraltar.

Fall of Seoul, 1950: North Korean forces have crossed the 38th parallel and invaded South Korea, in violation of UN agreements. This scenario covers the first three days of fighting for the US forces in the Korean war. Your tasks are as follows:

- * Coordinate an evacuation by air and sea from Seoul to US bases in Japan.
- * Establish air superiority over South Korea.
- * Conduct tactical interdiction against communist advance south of the 38th parallel.

MINUSMA, 2015: The atrocities committed by the rebel groups in Mali's north has taken a turn for the worse. The UN has authorized airstrikes to support the Malian government in its push to once again retake the north of the country. To support the UN's mission in Mali, Sweden has deployed its fighter jets abroad for the first time since the Congo Crisis. You are to employ airstrikes to weaken the rebels ability to wage an effective fight towards the government and you are to provide reconnaissance support for the Malian government if requested. Collateral damage or friendly losses will not be tolerated!

Norrland Defense, 1990: Defense of Norrland and its strategically important F 21 Luleå Airbase and Luleå Harbour from a pre-emptive Soviet strike in preparation for a full blown invasion. Defend the Luleå airbase against Soviet assaults and engage the Soviet ships and submarines reported in the area.

Sandbox Scenario #1: Surface Encounter, 1991: In this adaptation of scenario "Surface Encounter" from the boardgame "Harpoon: Captain's Edition", an Arleigh Burke-class destroyer is escorting a Whidbey Island-class LSD in the Norwegian Sea and it happens to detect a Soviet Sovremenny-class destroyer with an Ivan Rogov-class landing ship. A skirmish ensues with both sides trying to sink the other's escorted ships. The Soviets win a victory if they sink the LSD while the US wins if it can sink the Rogov.

To Kill A Mockingbird, 1979: This scenario pits the Soviet air defenses on the Kola Peninsula against the legendary SR-71 - and against the equally-legendary Soviet command chain bureaucracy! To win this mission, you must not only shoot down the dreaded Blackbird, but also do so only after receiving Moscow's permission. Better yet, you will not know where and when exactly the secretive plane is coming - this mission is designed to be dynamic and will play differently each time. Sometimes you will have a good shot, while other times the Habu will elude you entirely.

USS Midway vs Cuba (The War That Never Was), 1989: When WW3 breaks out in the early 1990s, it spreads everywhere, quickly. One exception has been Cuba, issuing an open letter of neutrality to everyone. However, Cuba is now planning on entering the war. The Soviet Union has instructed them to enter the war just as the US is sending the first of their heavy divisions towards Europe. What if Cuba did enter the war at this precarious moment? All that the US has standing between an entire nation's armed forces and the lifeline to Europe is the USS Midway, fitted with a scratch SAG and reserve F/A-18 squadrons. Can they hold the line?

Northern Fury 9.2 - Changing Of The Guard, 1994: The situation in the North Atlantic remains desperate. The rapid capture of North Norway and Iceland have allowed the Soviets to surge almost 100 submarines into the Atlantic. The USS Enterprise CVBG spent two difficult days blunting an attempt by the Red Banner Northern Fleet to interdict the sea lanes, she is now preparing to retire for re-supply and re-organization, as are the major Soviet surface units. The USS Eisenhower, after three days of hard fighting in the Mediterranean, has passed through the Pillars of Hercules and is heading north. She will join the USS Carl Vinson CVBG to strike at Soviet forces around Iceland in three days. As the NATO player you must safely withdraw the Enterprise CVBG and replace it with the Carl Vinson CVBG in a holding area south of Iceland. As the WP player you have multiple submarines and significant air assets at your disposal. Your task is to sink one or both US aircraft carriers.

Northern Fury 9.3 - Command At Sea, 1994: The USS Carl Vinson CVBG is moving up to relieve the Enterprise. The USS Eisenhower, after three days of hard fighting in the Mediterranean, has passed through the Pillars of Hercules and is heading north. She will join the USS Carl Vinson CVBG to strike at Soviet forces around Iceland in three days. As the NATO player you must maneuver and protect the USS Mount Whitney as it

transports the Commander of the US 2nd Fleet (NATO's CINCLANT) to a patrol area off the Azores. As the WP player you have multiple submarines and valuable intelligence indicating that a 'High Value Target' is arriving in your patrol area.

Northern Fury 9.4 - Cutting The Tether, 1994: This is a small but critical scenario in the battle to isolate Soviet forces on Iceland. Since taking the island of Jan Mayen in the first hours of the war, the desolate spot on the Greenland Sea has become a critical link in Iceland's supply chain, a long and arduous tether back to the Kola Peninsula. Your job in this scenario is to cut that tether.

Northern Fury 9.5 - Here Comes The Cavalry, 1994: The US 2nd Fleet is now ready for its first counter-attack. The 1st phase has the USS Eisenhower and the USS Carl Vinson CVBGs strike at Soviet forces around Iceland. In order to neutralize the significant Soviet forces on Iceland, your task is to move north and establish local air superiority over the Keflavik peninsula as a precursor to a large USAF strike tomorrow night. You have 28 hours to destroy Soviet Air Defences over Iceland. Detailed SEAD and Strike tasks will be the Air Force's job, but you need to clean the airspace to make that possible. You know that there are formidable air defences both on and over Iceland so this will not be an easy task.

Northern Fury 9.6 - Stab In The Dark, 1994: Your task is simple, as the Captain of the Canadian Submarine HMCS Onondaga, infiltrate Soviet ASW defences north of Reykjavik and insert a Special Forces team comprising of 4 Canadian JTF2 (Joint Task Force 2) and 4 British SBS (Special Boat Service) operatives. However you may find that in war – nothing is simple.

Northern Fury 10.1 - Poke in the Eye, 1994: 42 hours ago, your Special Forces team comprising of 4 Canadian JTF2 (Joint Task Force 2) and 4 British SBS (Special Boat Service) operatives arrived in Iceland. Now it's time to earn your paycheck.

Crossing the Line of Death (The War That Never Was), 1989: The two most powerful militaries in North Africa, Libya and Egypt, were not necessarily aligned with either NATO or the Warsaw Pact. This scenario, based upon the book *The War That Never Was* by Michael A. Palmer, begins with the neutrality of these states in doubt. Will Qaddafi side with the Soviets? Can the US cash in all the Egyptian IOUs?

Air Battle - The Litani River, 2017: Syria has placed SAM facilities in southern Lebanon, near the Litani River, and close enough to the Israeli border that they represent a threat to Israeli aircraft. After an incident in which an Israeli F-15 was nearly shot down, Israel has decided to eliminate the threat.

Battle of Kodel Channel (The War That Never Was), 1989: Geography was not kind to the Soviet Union and the Warsaw Pact. The Russian, Polish, and East German ports on the Baltic Sea were blocked from accessing the North Sea and ports beyond by the

nation of Denmark. The Danish islands formed the "cork" that sealed Warsaw Pact forces in the "bottle" of the Baltic Sea. This scenario attempts to re-create the "battle of Kodel Channel" from Michael A. Palmer's novel *The War That Never Was*. The Warsaw Pact forces are charged with being the "corkscrew" by forcing an amphibious landing near Copenhagen. To do this they will have to overcome air, surface, and subsurface (including mines) forces.

Great Pacific War - Breakout, 2020: It has been several years since the Taiwan reunification with China. War has broken out between the Sino-Russian (axis) alliance and Japan after an escalating crisis related to the ongoing dispute over the Senkaku Islands. The US and allies side with Japan but devastating Chinese and Russian strikes have crippled Japan and the major US bases in the Western Pacific. The axis have air and maritime dominance in the East China Sea and are preparing to invade Okinawa. An axis CSG group has passed through the Miyako Strait into the Western Pacific to cut off Okinawa and Japan from allied reinforcements. An allied carrier strike group sailing toward the area is tasked with the securing sea lanes leading to Japan.

Great Pacific War - Breakout, 2020 [No subs]: A variation of the above scenario without submarines.

Iran Airbase Attack Drill, 2014: The Iranian Air Force has decided to stage an exercise testing their offensive capabilities. Aircraft from an airfield in western Iran are to hit another airfield defended by the best technology the nation can provide.

Littoral Mission - Cebu Strait, 2018: This scenario assumes serious civil unrest and terrorism has continued to plague the Philippines. The Philippines has turned to one of its closest allies, the United States, to assist them in hunting down terrorists based on Bohol Island.

Mexican Fishery Conflict, 2017: Mexico's navy is not primarily designed for power projection, but rather to defend its long coastline and its large exclusive economic zone (EEZ). This scenario assumes that Guatemalan fishing boats have been violating Mexcian fisheries. The crews of these fishing boats have started to take matters into their own hands, ramming other boats and occasionally firing shots from pistols and rifles (not to mention the occasional black market machine gun). Both Mexico and Guatemala have deployed patrol vessels to the area to keep the peace.

Northern Fury #9.7 - Sub Surge, 1994: The situation in the North Atlantic remains desperate. The rapid capture of North Norway and Iceland have allowed the Soviets to surge almost 100 submarines into the Atlantic. The USS Enterprise CVBG spent two difficult days blunting an attempt by the Red Banner Northern Fleet to interdict the sea lanes, she is now preparing to retire for re-supply and re-organization, as are the major Soviet surface units. The USS Carl Vinson CVBG is moving up to relieve the Enterprise. The USS Eisenhower, after three days of hard fighting in the Mediterranean, has passed

through the Pillars of Hercules and is heading north. She will join the USS Carl Vinson CVBG to strike at Soviet forces around Iceland in three days. This scenario focuses on pushing NATO submarines and some unique capabilities through the Greenland Sea to the very edge of the Barents Sea and the Arctic Ocean. The Soviets consider this area home waters, and protect the Barents Sea, one of their critical 'Bastions', vigorously. In addition to standard sub vs. sub action you will be required to complete several special missions while the Soviets hunt for you with plentiful and alert air, surface and sub surface forces.

Northern Fury #10.2 - Ant Eaters Revenge, 1994: The US 2nd Fleet is now conducting its first major counter-attack. The 1st phase by 2 CVBGs attacking to gain air superiority around Iceland is complete. Now it is time to shut down the Soviet airbases. You are tasked with conducting a decisive airstrike with the 27th Tactical Fighter Wing (TFW) reinforced, while transiting your forces to England. The 27th TFW consists of 3 squadrons of F-111s and a supporting squadron of EF-111 ECM aircraft; for this strike the wing has been reinforced by a squadron each of F-15C, F-15E, F-16CJ, F-4G Wild Weasel, F-117 Nighthawk and other supporting forces.

Northern Fury #10.3 - Decapitation, 1994: The US 2nd Fleet is now conducting its first major counter-attack. The 2nd phase aimed at shutting down the Soviet airbases on Iceland has just completed. Now Phase 3 is starting: You are tasked with conducting precision strikes to eliminate HQ and C2 facilities on Iceland.

Northern Fury #10.4 - BUFF Stampede, 1994: The US 2nd Fleet is now conducting its first major counter-attack. The 3rd phase occurred earlier today when the 2 CVBGs moved north again to conduct precision strike on C2 targets. Now it is time to bring in the heavy hitters and restore cave dwelling as an acceptable way of life for the Soviets on Iceland! You are to conduct a short, sharp bomb run of key facilities remaining on Iceland while transiting the 2nd Bomber Wing to bases in England. Your bomber wing is comprised of 3 Squadrons of B-52s and has been augmented by a squadron each of B-1Bs, EF-111s, F-16 Blk 40s and several squadrons of tankers. As well as support from elements of 2nd Marine Air Group (2MAG), and a U-2, the 'Spirit of Missouri' one of 8 operational B-2s will make that type's combat debut.

Operation Adelaide, 2016: This scenario assumes an armed conflict has broken out between Liberia and Sierra Leone. Sierra Leone has crossed the border into Liberian territory, occupied the town of Bo Waterside and refused to withdraw. Liberia has requested help from the United States. The USS Jackson (LCS-6) has been fitted with a COIL laser weapon for this mission.

Operation Baltic Vigilance, 2020: Sweden and Estonia are holding a joint Airforce and Navy exercise. You are tasked to destroy several key military and civil infrastructure

targets deep inside Estonia, these will be protected by enemy aircraft and SAM sites. Destroying radar installations, SAM sites and airplanes is your secondary objective.

Operation Bayern, 1965: Tanzania became independent of Great Britain in the early 1960s. This scenario assumes that the Soviet Union replaced its president, Julius Nyerere, with a puppet leader they could control and set about turning Tanzania into a militarized "African Cuba". President Johnson considers this unacceptable. However, rather than just wait for Tanzania to become a new Soviet fortress in the Third World, Johnson intends to nip the problem in the bud.

Operation Reclaimed Might, 2015: A recreation of the Russian cruise missile strike on Islamic State targets in Syria, from ships in the Caspian Flotilla, on October 7, 2015.

Protecting Peacekeepers on Samar, 2024: The civil unrest that has plagued the Philippines becomes significantly worse by the early 2020s. Several rebel groups are active in the archipelago, some engaged in guerilla activities against government forces, some ideologically-motivated terror groups, and others little more than well-armed gangs of bandits. The Philippines has requested assistance both from its allies and the United Nations. One current operation is the deployment of U.N. peacekeepers and aid workers on the island of Samar, which has become the stronghold of one of the guerilla groups. Recently the rebels were successful in stealing a few older tanks and artillery pieces from the Philippine government. U.N. forces on the island are engaged in peacekeeping and humanitarian operations. The United States has been charged with assisting the Philippines in providing security for the peacekeepers.

The Shores of Tripoli (The War That Never Was), 1989: The opening moves against Libya by NATO were a great success. The Libyan IADS around Tripoli has been virtually dismantled and the Marines of the 26th MEU have been successfully landed at Zuwara. Initial opposition has been very light and the Marines have driven to within 25 miles of Tripoli. Meanwhile, NATO's military successes have paid off on the diplomatic front. Egypt has agreed to attack Libya and will begin driving towards Tubruq. Will the Libyan army collapse under the weight of a two front attack? Or does the "Crazy Colonel" have some tricks up his sleeve?

Turkish Revenge, 2012: In June 2012, Syrian air defenses shot down a Turkish RF-4, killing both crew and setting the tone for the confrontational Ankara-Damascus relationship that involved the TuAF shooting down multiple Syrian aircraft, and, most recently, a Russian Su-24. This scenario involves the Turks hitting back at sea instead, with a submarine being deployed to sink two Syrian corvettes. However, the Assad regime and its allies are prepared for any counterattack...

Uncle Mark's Tutorials #6 - Toledo Hits 'Em Hard, 2004: Al-Qaeda camps have been discovered in northern Pakistan. The Pakistani government has been unwilling to allow the United States to strike directly at these terrorists, on the grounds that camps found within their sovereign territory are under their jurisdiction. However, in this case, HUMINT sources indicate that elements within the Pakistani military are sympathetic to Al-Qaeda and are trying to shield the terrorists. Washington intends to take action. Pakistan has warned the United States that it will not tolerate direct military action against targets within its territory. The US, however, have no intention of allowing the terrorists to escape justice.

Sandbox Scenario #2: East Med A2/AD, 2016: On 13 January, 2016, a Turkish F-16 is shot down by Russian fighters after it crossed into Syrian airspace northwest of Idlib. Russia offers no apology and warns Turkey not to allow its fighters to stray into airspace where Russian military forces are conducting operations. In response, the Turks denounce the Russian action and warn against further Russian aggression. Heeding the advice of NATO military commanders, however, Turkey has been allowing Russian aircraft operating against rebel positions in close proximity to the border some wiggle room. Despite the hostile 'attack' against its F-16, Turkey allows the small buffer zone to remain in place. However, Adana has announced that it will regard any aircraft that menaces its airspace as hostile and they will be fired upon and brought down. For one week afterward, tensions have simmered, but Russian air activity over Syria has been nonexistent. Then on 19 January, 2016 Russia announces that airstrikes against rebel positions near the Turkish border will resume within 24 hours. The announcement increases the level of tension in the region as the possibility of a confrontation with Turkey increases. NATO has released a statement warning if Russia disregards the sovereignty of Turkish airspace and/or launches an attack on Turkish forces, Article 5 will be invoked immediately.

Alfa Wolf Pack, 1987: The Third World War has begun. There are offensive operations around all the globe. Norway has signed a pact with the USSR, declaring neutrality. The world is teetering on the brink of a nuclear war. At this moment both sides are only using tactical nuclear weapons at sea due to the threat of Mutally Assured Destruction. A NATO anti-submarine surface group is trying to enter Soviet bastions in order to destroy their SSBN fleet. You will handle the Soviet response to this strategic threat.

The King's Hand, 2016: The assasination of Saudi Arabia's King Muhammad bin Salman by Egyptian special forces draws the two countries with teetering relations into dire straits. A secret military plan known as "The King's Hand", an assault on an air base in Fayed and the home of the Egyptian military unit responsible for the assasination, comes into play. But some advisors worry that the plan is too little, too late as a military build-up by Cairo has been brewing for months. Can you beat an advisory that has a 2 to 1 advantage in air superiority?

Good Morning Malvinas, 1982: In the aftermath of the re-capture of South Georgia by British forces, it became clear that the Argentine government would not be open to a diplomatic resolution. In light of this, Prime Minister Thatcher authorised operation Black Buck, a series of Vulcan B.2 raids against Argentine forces on the Falklands. Your mission, as commander of TF 317, is to conduct covert insertion of special forces on West Falkland, perform follow-up Sea Harrier strikes on Goose Green Airfield and Stanley Airport, and achieve and maintain air and sea control within the total exclusion zone.

Bosphorus Blues (The War That Never Was), 1989: Thanks to controlling 75% of its borders, the Soviet Union had complete control over the Black Sea. This didn't provide much of a strategic advantage due to one of the most amazing geological features in the world: the Bosphorus. This narrow waterway, dominated on both sides by Turkey, is the only access from the Black Sea to the rest of the world. This scenario, based upon the book *The War That Never Was* by Michael A. Palmer, charges the Soviet forces with opening the straight through force. This requires careful coordination between air, land, and sea forces.

Cold War Continued #1: Eve Of Destruction, 1995: On October 28, 1995, an explosion in the Baku Metro in Baku, Azerbaijan SSR, killed nearly 300 people. The Soviet Union and her allies blamed western agents for the attack, and promised that a harsh response would be met to the West. The West once again didn't take this threatening of an attack seriously. What happened on October 31, 1995, changed the world forever...

Frigate Duel in the Scotia Sea, 2023: Tensions have increased between Argentina and the United Kingdom, partly because of the recent discovery of large deposits of valuable minerals in the undersea basins south of the Falkland Islands. Argentina has replaced its aging destroyer fleet with a quartet of fast frigates based on the LCS-Independence design. One of these ships is steaming off Cape Horn to contest the area against a RN upgraded Type 23 frigate.

The Lost Province, 2017: Nearly 70 years after the Nationalists fled to Taiwan, the PRC leadership has decided that the time has come to retake the island. You are ordered to initiate the invasion with a large air and surface force, supported by a hail of ballistic missiles.

Operation Mole Cricket 19, 1982: During the 1982 Israeli offensive into Lebanon, it became apparent that the strong presence of Syrian SAMs would threaten Israeli air superiority over Lebanon. As Syrian Forces moved even more SAMs into the region, Israeli leadership ordered strikes against the SAM sites. What followed would be subsequently known as the "Bekaa Valley turkey shoot".

Skagerrak, 1963: A NATO task force must escort two ammunition ships through the Skagerrak Straits to the inlet of Oslo.

Contingency, 2016: France has a long and accomplished history of successfully projecting military power in support of its national security goals from the American Revolution to the current war on terror. It does that by acquiring basing rights and staging small detachments of ground, air and naval forces worldwide that in the event of a crisis are in a better position to impact an outcome while more power is pushed into the theater. This scenario demonstrates the extend and limits of this ability in a series of evolving crises.

The Honduran-Cuba War, March 12, 1968: In 1955 large quantities of iridium were discovered in Honduras. The country, which suddenly found itself in possession of most of the world's accessible supply of this rare metal, quickly took advantage of its new wealth to become a regional power, purchasing military aircraft, a flotilla of small warships, and even a submarine from the United States. Unfortunately, the newfound prosperity could not solve every problem, and Honduran relations with Cuba have deteriorated since the Communist Revolution in that country. By 1968, tensions with Cuba have reached a breaking point. When a Cuban patrol boat fired on a Honduran fishing boat that had strayed too close to (but, according to Honduras, not within) Cuban waters, a Honduran destroyer first requested it break off its attack. When it was clear the Cubans had no intention of ceasing their attack and that civilian lives were in peril, the Hondurans sank the Cuban warship. Cuba has declared this casus belli and is preparing for war.

The Honduran-Cuba War, March 19, 1968: So far, Honduras is "winning"; while they have lost several aircraft, one of their elderly destroyers, and one of their minesweepers (which double as offshore patrol vessels), Cuba has lost three small frigates and more than a dozen combat aircraft. Cuba has sworn to make Honduras pay for its "crimes against world socialism". Honduras is concerned about merchant shipping; it relies, among other things, on being able to get the iridium it mines to wealthy buyers like the United States. It also needs to purchase and then transport munitions to replace those expended so far in the war. Of particular concern are the Komar-class missile boats operated by Cuba. Honduras operates a number of older vessels purchased from America which offer significant firepower in the form of naval gunnery but have limited anti-missile defenses.

The Honduran-Cuba War, March 26, 1968: The war continues. Honduras has managed to negotiate an emergency purchase of F-4 Phantoms to replace those lost in combat; in addition, it has assigned some of its elderly but still capable F4U Corsairs to fly CAP missions over the northern coast. The real problem is ammunition--the supply of

missiles for the Phantoms is running short. A convoy with badly needed supplies is en route from America. It is essential that at least some of these ships make it to Honduras.

Warthogs Over Latakia, 2013: The 2013 Syrian chemical crisis has escalated into total war. NATO's initial strikes on Syria's chemical weapons facilities have proven insufficient, and the downing of several NATO aircraft during the attacks has made the government overconfident. The decision has been made to strike directly at the regime's army, as losing its conventional strength would mean being overrun by rebels. Two squadrons of A-10 Thunderbolts have been assigned to the task.

The Bridges at Toko-Ri, 1952: The movie "The Bridges at Toko-Ri" was based on author James Michener's writings as an embedded reporter on USS Essex (CV 9) and USS Valley Forge (CV 45) in the winter of 1952. This scenario is loosely based on the movie. Take command of Task Force 77.9, centered on the USS Essex, and execute defense suppression strikes in support of a USAF attack on the two railroad bridges.

Crimea River, 2016: The winter of 2015 was a brutal one for Russian-annexed Crimea. Due to the collapse in oil prices and continued economic sanctions by the West, the Russian Federation economy was in shambles. In January 2016 dissatisfaction turned to uprising, and the first Crimean rebellion was brutally suppressed by Spetsnaz elements. After leaked footage of mass graves was published, NATO was politically forced to take sides. A large strike on Russian military assets in Crimea was planned and NATO assets were assembled. Russia was alerted in time, however, and placed significant forces in anticipation of this attack. Despite Russia's readiness, the political climate still necessitated direct action. NATO's strike, codename OPERATION CLEAN SWEEP, was authorized to proceed.

Convoy '88, 1988: This scenario takes place in May 1988, five days into a hypothetical NATO-Warsaw Pact conflict in Europe. Had the Cold War escalated into a shooting war, control of the North Atlantic would have been essential for both sides. For NATO the objective would've been to keep the sealanes open and protect the convoys bound for Europe from Soviet submarines and bombers. The Soviets' primary goal was to close the Atlantic and deny NATO resupply from the sea. Convoy '88 puts the player in the role of Convoy 88-7's commander for 24 hours. This is primarily an ASW scenario, however a respectable air threat is also included.

The 4th of July, 1989: It is the summer of 1989, and the revolutionary wave of dissent that has been sweeping through the Soviet Union and other Warsaw Pact Countries has been brutally put down. Soviet military forces on the Central Front have been reinforced, and NATO intelligence is seeing some disturbing movement of Soviet front-line tanks and troops in East Germany. Recent NATO troop withdrawals in Europe have once more made tactical nuclear weapons necessary to stop a possible Soviet breakthrough. The

Soviets would also be expected to employ tactical nukes. It is now July 4th, 1989, and the Soviet Union has decided to lay claim to all of Germany.

Korean Campaign, 2018: It is the spring of 2018, and it appears that Kim Jong-un is finally going to make good on his constant threats to launch an attack into South Korea. After upgrading some of his military equipment from China and Russia, Kim has massed over 600 tanks, long range artillery batteries, and infantry units along the border. The U.S. and South Koreans are prepared to launch OPERATION BROAD SWORD, a pre-emptive combined-arms attack on the North Korean Ground Forces. A reinforced convoy is en-route to the port of Busan with critical fighting forces and supplies. The Chinese also have substantial forces in the area, but are not considered hostile as of yet. Can the U.S. and S.Koreans stop the massed North Korean armor before it reaches Seoul, and get the convoy safely to Busan?

White Piano, 1966: Italy and Yugoslavia are mobilizing against each other. Italian intelligence suggests that Yugoslav forces are about to attack Trieste, the important and long-contested port city. A surface group centered on the aviation cruiser Andrea Doria is dispatched to protect the city.

Big Fish In The Baltic, 1971: In recent days tensions have soared between Sweden and the Soviet Union and its allies due to an incident where a naval skirmish took place in international waters resulting in the sinking of several ships on both sides. Swedish intelligence now suggests that the East German navy is trying to launch a surprise naval attack on Gotland. The Swedish navy has been effectively blockaded by swarms of missile boats in the Southern Baltic, so the air force alone has to blunt the incoming onslaught.

The Bear And The Dragon, 2023: Relations have broken down between China and Russia, and now a Chinese amphibious task force moves to capture Vladivostok. But they will have to run a gauntlet of Russian submarines and bombers to do so.

Northern Fury #11.1 – Vagar Vengeance, 1994: Strike Fleet Atlantic is now conducting its first major counter-attack. The 1st phase was the softening up of Soviet defences on Iceland which has taken place over the past several days. Now as a preliminary move to the retaking of Iceland, the Faroe Island chain must be secured with a primary focus of the Vagar island airport. You are the Commander of TG Invincible and supported by the French carrier Clemenceau, surface, subsurface and amphibious forces as well as land based air elements. Your task is to unhinge the Soviet defences, protect reinforcing airborne operations and clear the defenders out of the Faroe Islands, all while protecting civilian infrastructure and preserving your force. The Soviets however, have other ideas.

Breaking Bad, 2015: In a shocking turn of events, the CIA has confirmed that Iran has turned its allegiance towards AQAP and supplying the terrorist group with money, arms and training. The Yemeni Civil War could turn for the worst as Iran attempts to fight a proxy war against the US and gain control of the Bab al-Mandab Strait and the Red Sea. The US president, going against the wishes of his civilian advisers, puts his trust into his military advisers and begins to put boots on the ground in Yemen.

The Akusekijima Conflict, 2019: A variety of factors (crop failures caused by global warming, collapse of fish populations due to overfishing, etc.) have resulted in Chinese fishing boats violating Japanese fisheries on an increasing basis. Japan has protested this behavior but Chinese officials have ignored it. In addition, Japan's increasingly aggressive rhetoric about the issue has created tensions between the two countries. China has become less and less willing to tolerate even lawful actions by the Japanese when it involves their citizens.

The Seventh Battle, 1992: In this unofficial sequel to Barret Tillman's famous "Sixth Battle", a shaky cease fire has been established off the coast of South Africa due to the presence of other countries joining the fight against the Soviet alliance, such as British subs and the French Indian Ocean Squadron, as well as the arrival of the USS Eisenhower CVBG. But the cease fire is now collapsing, and the seventh battle between carrier groups is about to commence.

Ruby Slipper, 2016: North Korea is plunged into civil war, with the Kim regime (covertly supported by China) fighting for its survival against the so-called "Democratic Workers Party" (dissident elements supported by Russia). Russian intelligence suggest that the Kim regime, desperate to hold on to power, is preparing to use its cache of nuclear weapons against both rebel and Russian forces – and the PRC intends to help. Russia mobilizes to prevent this outcome.

Peeling The Onion, 1957: You are Commander, 308th Bombardment Wing, Strategic Air Command equipped with B-47E medium bombers and normally based at Hunter Air Force Base (AFB), outside Savannah, GA. You are also the current OP REFLEX Commander on temporary duty at Sidi Slimane AFB in French Morocco and in the event of war will be responsible to conduct nuclear strikes against the Soviet Union out of the SAC forward bases. Hostilities with the Soviet Union have not commenced but if they do, your mission will be to attack Soviet industrial targets starting in southern Russia on the Black Sea coast. War could be just hours away...

Standoff-21, 2019: With Argentina once again attempting to take the Falklands, the UK resorts to a standoff bombardment in a repeat of the legendary "Black Buck" raids of 1982. The never-was Nimrod MRA4 makes its combat debut in this scenario.

Red Iceland, 1980: After the financial crash of 1979 the people of Iceland protested the presence of NATO forces on their home island as a base, effectively turning it into a nuclear target for the USSR. After violent demonstrations and the Icelandic government resigning, NATO agreed to leave the island on the condition that the island remain a demilitarized zone. The Soviets saw an opportunity in this, and with the help of infiltrators and what was presumed to be Spetsnaz units power was taken via a coup d'état by the Communist Party of Iceland. The Soviets maintain that they have only deployed a token force to the island in May, 1980 to "maintain the integrity of the Icelandic government" but this was clearly in violation to the agreement priority reached. More Soviet convoys are headed to Iceland, some of them even loaded with medium range nuclear ballistic missiles; these must be stopped at any cost.

Northern Fury #10.5 – Sweep Up, 1994: The US 2nd Fleet is now entering the final phase of its first major counter-attack. A ceaseless combination of bomber and carrier borne attacks over the past 60 hours has reduced the defences on Iceland significantly! Now all that is left is the task of sweeping up the last few targets and preparing the ground for the amphibious assault by the Marines tomorrow. If you have learned anything this past week however; nothing is simple.

Caribbean Fury #1 – Hot Tamales, 1994: You are commanding the USS John F. Kennedy CVBG on routine patrol in the Caribbean. Although homeport is Norfolk Virginia, the Battle Group has been operating out of New Orleans Louisiana for most of the past year due to the increased tensions in Central America. The air wing (CVW-7) has just completed 4 days of intense training with the Army up at Fort Hood, and you now heading to Roosevelt Roads Puerto Ricco for some ASW and ASuW work.

Merry Christmas, 1998: This scenario is a fictional engagement between the Australian Commonwealth, US, Malaysian Forces and a fast moving Indonesian coup. The coup has arrayed two prongs you will to blunt, one, an outgoing invasion fleet and two, a bustling Naval Base supporting the invasion of a neighbor island. They are not mutually exclusive problems, both need to be destroyed. In addition, various other disconnected issues will need to be dealt with, from minesweeping to area defense.
